Animal diseases	370	Extension Service	685

INTRODUCTION

Agricultural Statistics brings together each year the more important series of statistics compiled in the Department of Agriculture or in other departments whose work concerns agriculture. Although far more information is available than can be included in a single volume, the tables selected give a wide variety of facts in forms suited to most common uses. Inquiries concerning more detailed data or the statistical methodology used should be addressed directly to the agencies to whom tables in this volume are credited. These agencies can also answer questions about past and prospective revisions in published data.

Historical series have again been generally limited to data beginning with 1929 or 1930, or to the most recent 10 years. Agricultural Statistics for 1942 is still the most complete reference for earlier data. In building up series from earlier volumes, however, it should be remembered that statistics most recently published supersede those published previously.

The Table of Contents indicates the general lay-out of the book, and page headings indicate the sub-divisions within each chapter. Short introductions at the beginning of each chapter are mostly new this year. These introductions explain the main effects of the 1945 Census on previously-published statistics, and describe some of the new material included this year.

When the word "Yearbook" appears alone, it refers to the Yearbook of Agriculture, published annually by the Department of Agriculture. Through 1935, approximately one-half of each Yearbook carried the kind of material which is now published separately in Agricultural Statistics.

RECENT REVISIONS

This is the first edition published since the completion of the reviews of many series following the 1945 Census of Agriculture. Unless otherwise noted, the revisions resulting from the census affect only data for 1939 through 1945. For census years, many tables carry both census figures and this Department's estimates.

In comparing the census figures with estimates, it should be remembered that the two types of data are determined by different methods and for different purposes.

Census data are the results of the most nearly complete enumeration or actual count that can be made, and are used for many other purposes than determining State and national totals and averages. For example, each census provides much detailed information about counties and minor civil divisions. It also provides data

which can be organized into many frequency distributions and cross-classifications for large or small portions of the country.

Estimates of the Department of Agriculture are made primarily to give timely current State and national totals and averages. They are based on "benchmark" data supplied by the quinquennial census of agriculture and on sample data supplied by farmers and by people who do business with farmers, together with check data from other sources. Being estimates, they are subject to revisions as more data become available from commercial or government sources.

In contrast, the definition of a census precludes revising census data to bring them in line with other indications, even though in practice it is difficult to obtain a complete enumeration. Any effort to make such revisions would produce estimates.

Generally, where there are appreciable differences between census figures and this Department's final estimates, the process of checking and revising estimates has indicated that some sources provide more nearly complete information about some items than the census has been able to obtain. For example, this Department's estimates of tobacco production can be considered more precise than census figures, because the estimates are revised in line with actual production as shown independently by Internal Revenue records and State records of tobacco sales. Sugar-beet and sugar-cane production and acreage estimates are adjusted to the quantities actually reported by sugar factories. Check information on peanuts is available from processors for areas sometimes including several States. There is another illustration in the introduction to the chapter on livestock statistics.

Additional information about the relation between census data and the Department of Agriculture's estimates can be obtained from the Bureau of Agricultural Economics, U.S. Department of Agriculture, Washington 25, D.C.

WEIGHTS, MEASURES, AND CONVERSION FACTORS

"Ton" when used in this book without qualification means a short ton of 2,000 pounds.

The subjoined table of weights, measures, and conversion factors covers the most important agricultural products, or the products for which such information is most frequently asked in the Department of Agriculture. It does not cover all farm products nor all containers for any one product.

The figures were assembled from various sources within the Department and from State schedules of legal weights. For most products, particularly fruits and vegetables, there is a considerable variation in weight per unit of volume, due to differences in variety or size of the commodity, condition and tightness of pack, degree to which the container is heaped, etc. Effort was made to select the most representative and fairest average for each product. For such commodities as develop considerable shrinkage, the point-of-origin weight or weight at harvest was used.

The approximate or average weights, as given in this table, do not necessarily have official standing as a basis for packing or as grounds for settling disputes. Not all of them are recognized as legal weights. The table was prepared chiefly for use of workers in the Department of Agriculture, who have need of conversion factors in statistical computations. The figures are subject to revision.

(See explanatory text just preceding this table)

WEIGHTS AND MEASURES

Commodity	Unit ¹	Approximate net weight	Commodity	Unit ¹	Approximate net weight
Alfalfa seed.....	Bushel.....	Pounds 80	Figs, fresh.....	Box, single layer ¹	Pounds 6

¹Standard bushel used in the United States contains 2,150 42 cubic inches, the gallon, 231 cubic inches; the cranberry barrel, 5,826 cubic inches, and the standard fruit and vegetable barrel, 7,056 cubic inches. Such large-sized products as apples and potatoes sometimes are sold on the basis of a heaped bushel, which would exceed somewhat the 2,150 42 cubic inches of a bushel basket level full. This also applies to such products as sweetpotatoes, peaches, green beans, green peas, spinach, etc.

²Approximate inside dimensions, 10½ by 11½ by 18 inches

³Approximate inside dimensions, 4½ by 16 by 16 1/8 inches.

⁴Approximate inside dimensions, 9½ by 11 by 20 5/8 inches

⁵Approximate inside dimensions, 3½ by 13½ by 16 1/8 inches

⁶Approximate inside dimensions, 4 3/16 by 13½ by 16 1/8 inches

⁷Approximate inside dimensions, 13 by 18 by 21 5/8 inches

⁸Approximate inside dimensions, 13 by 13 by 22 1/8 inches

⁹This is the weight commonly used in trade practice, the actual weight varying according to temperature conditions

¹⁰Approximate inside dimensions, 22 by 16 by 20½ inches

¹¹Approximate inside dimensions, 3½ by 11½ by 14 1/8 inches

¹²The standard weight of 70 pounds is usually recognized as being about 2 measured bushels of corn, husked, on the ear, because it requires 70 pounds to yield 1 bushel, or 56 pounds, of shelled corn.

¹³For statistical purposes the bale of cotton is 500 pounds gross or 478 pounds net weight. Actual bale weights vary considerably, and the customary average weights of bales of foreign cotton differ from that of the American square bale

¹⁴This is the average weight of cottonseed, although the legal weight in some States varies from this figure of 32 pounds

¹⁵Approximate inside dimensions, 9½ by 10½ by 15 inches

¹⁶Approximate inside dimensions, 1½ by 11 by 16 1/8 inches

¹⁷Approximate inside dimensions, 12 by 12 by 24 inches.

¹⁸Approximate inside dimensions, 11½ by 11½ by 24 inches.

¹⁹Until 1942, these net weights as used in this Department (for figuring quantities and values of bulk fruit in terms of packed boxes) were 60 pounds for grapefruit, 76 pounds for lemons, and 70 pounds for oranges. Grapefruit in the Desert Valley of California and in Arizona probably weighs slightly less than that in other parts of California, or about 65 pounds per box, compared with 68 pounds in other California.

²⁰Approximate inside dimensions, 5½ by 13½ by 16 1/8 inches.

²¹Approximate inside dimensions, 4½ by 16 by 16 1/8 inches.

²²About 13 pounds of sawdust are required to pack 32 pounds of grapes in a keg, thus making the total weight about 45 pounds

²³Approximate inside dimensions, 7½ by 15 by 18½ inches.

²⁴Approximate inside dimensions, 9 7/8 by 13 by 25 inches

²⁵Approximate inside dimensions, 8½ by 11½ by 18 inches.

²⁶Approximate inside dimensions, 12 by 10½ by 33 inches.

²⁷Approximate inside dimensions, 3½ by 11 by 18 inches

²⁸This average of 55 pounds indicates the usual weight of sweetpotatoes when harvested. Much weight is lost in curing or drying, and the net weight when sold in terminal markets may be below 55 pounds

²⁹Approximate inside dimensions, 6 by 12 by 24 inches. This is the box ordinarily used in market sales. Farm weight is about 90 pounds per whole box.

(See conversion factors on next page)

CONVERSION FACTORS

Commodity	Unit	Approximate equivalent
Apples.....	1 pound dried....	7 pounds fresh, beginning 1943, 8 pounds fresh.
Do.....	1 pound chops....	5 pounds fresh.
Do.....	1 barrel.....	3 boxes or 3 bushel baskets.
Apricots.....	1 pound dried....	5 1/4 pounds fresh.
Barley flour.....	1 barrel (196 lbs)	9 bushels barley.
Beans, lima.....	1 pound shelled..	2 pounds unshelled.
Buckwheat flour.....	1 barrel (196 lbs)	7 bushels buckwheat.
Cane sirup.....	1 gallon.....	5 pounds sugar.
Cherries.....	1 pound dried....	4 pounds fresh in California, 5 pounds fresh elsewhere.
Corn, shelled.....	1 bushel (56 lbs)	2 bushels (70 pounds) of husked ear corn.
Corn meal.		
Degermed.....	1 barrel (196 lbs)	6 bushels corn.
Nondegermed.....	...do.....	4 bushels corn.
Cotton.....	1 pound ginned...	2.86 pounds unginned, up until 1943.
Dairy products		
Butter.....	1 pound.....	21 pounds milk.
Cheese.....	...do.....	10 pounds milk.
Condensed milk, whole.....	...do.....	2.2 pounds milk.
Evaporated milk, whole.....	...do.....	Do.
Ice cream ¹⁰	1 gallon.....	15 pounds milk.
Ice cream ¹⁰ (eliminating fat from butter and concentrated milk).	...do.....	12 pounds milk.
Malted milk.....	1 pound.....	2.6 pounds milk.
Powdered milk.....	...do.....	8 pounds milk.
Powdered cream.....	...do.....	19 pounds milk.
Dates.....	1 pound dried....	1 1/3 pounds fresh
Eggs.....	1 case (45 lbs)..	37.5 pounds frozen or liquid eggs, since 1937.
Do.....	...do.....	10.1 pounds dried eggs.
Figs.....	1 pound dried....	3 pounds fresh in California, 4 pounds fresh elsewhere.
Grapefruit, Florida.....	1 case canned....	Slightly less than 1 box fresh fruit.
Flaxseed.....	1 bushel.....	Yields about 2 1/2 gallons oil.
Linseed oil.....	1 gallon.....	From 0.4 bushel flaxseed.
Malt.....	1 bushel (34 lbs)	1 bushel barley (48 lbs.).
Maple sirup.....	1 gallon.....	8 pounds maple sugar.
Nuts.		
Almonds, imported.....	1 pound shelled .	3 1/3 pounds unshelled.
Almonds, California.....	...do.....	2.22 pounds unshelled
Brazil.....	...do.....	2 pounds unshelled
Cashews.....	...do.....	4.55 pounds unshelled.
Chestnuts.....	...do.....	1.19 pounds unshelled.
Filberts.....	...do.....	2 22 pounds unshelled.
Pecans		
Seedling.....	...do.....	2.63 pounds unshelled.
Improved.....	...do.....	2.38 pounds unshelled.
Pignolias.....	...do.....	1.3 pounds unshelled.
Pistachios.....	...do.....	2 pounds unshelled.
Walnuts		
Black.....	...do.....	8 1/3 pounds unshelled.
Persian (English).....	...do.....	2.38 pound unshelled.
Oatmeal.....	1 barrel (180 lbs)	13 2/3 bushels oats, beginning 1943.
Peaches, California, freestone	1 pound dried....	5 1/4 pounds fresh through 1918; 6 pounds fresh for 1919-28, and 6 1/2 pounds fresh from 1929 to date.
Peaches, Calif., clingstone	...do.....	7 1/2 pounds fresh
Peanuts.....	1 pound shelled..	1 1/2 pounds unshelled
Pears.....	1 pound dried....	5 1/2 pounds fresh.
Peas, green.....	1 pound shelled..	2.5 pounds unshelled.
Prunes.....	1 pound dried....	2 1/2 pounds fresh in California, 3 to 4 pounds fresh elsewhere.
Raisins.....	1 pound.....	4 pounds fresh grapes.
Rice.....	105.3 pounds milled	162 pounds rough or unhulled rice.
Rye flour.....	1 barrel (196 lbs)	6 bushels rye; beginning 1944, 4.6 bushels rye.
Sugar.....	1 ton raw....	Hawaii, 0.9617 ton refined, Puerto Rico and Philippines, 0.946 ton refined, Cuba, 0.9418 ton refined, beginning with the 1931-32 season; Louisiana (96% raw), 0.9346 ton refined, beginning 1919; Florida (96% raw), 0.9346 ton refined, beginning 1928.
Tobacco.....	1 pound farm-sales weight.	Various weights of stemmed and unstemmed, according to aging and the type of tobacco. (See Circular 435, U. S. Dept. of Agr.).
Wheat flour.....	100 pounds.....	2.33 bushels wheat ¹¹ .
Wool.....	1 pound scoured...	2 pounds grease.
Do.....	1 pound pulled....	1 1/3 pounds grease.

¹⁰The milk equivalent of ice cream per gallon is 15 pounds. Reports from plants indicate about 81 percent of the butterfat in ice cream is from milk and cream, the remainder being from butter and concentrated milk. Thus the milk equivalent of the milk and cream in a gallon of ice cream is about 12 pounds.

¹¹This is equivalent to 4.56 bushels of wheat per barrel (196 pounds) of flour and has been used in conversions beginning July 1, 1944. Because of changes in milling processes, the following factors per barrel of flour have been used for earlier periods: 1790-1879, 5 bushels; 1880-1908, 4.73 bushels; 1909-1917, 4.7 bushels; 1918 and 1919, 4.5 bushels; 1920, 4.6 bushels; 1921-44, 4.7 bushels. From March 1 to Nov. 1, 1946, the milling rate averaged about 2.20 bushels wheat per 100 pounds flour.

STATISTICS OF GRAINS

Estimates of acreage production, farm disposition, stocks, prices received by farmers, and farm value, which make up most of this chapter, are prepared from sample data supplied by many thousands of voluntary reporters, coupled with check information from Government and trade sources. Estimates in much greater detail are published regularly by the Crop Reporting Board.

The 1939-45 data in this chapter have been revised in the light of the 1945 Census. Estimates for 1946 are subject to revision in December 1947, and again after the next Census.

Tables on sorgo sirup, which might be expected in the sorghums group, are included with "sugar crops." Popcorn and broomcorn tables are included with "minor field crops." Corn sugar and corn sirup, however, are included in the corn tables in this chapter.

TABLE 1 -Wheat Acreage, production, value, and foreign trade, United States, 1929-46

¹Includes acreage seeded in preceding fall for harvest in the year shown.

²No. 2 Hard Winter, computed by weighting selling prices by number of carlots sold, as reported in the Kansas City Grain Market Review.

³No. 1 Dark Northern Spring, computed by weighting selling prices by number of carlots sold, as reported in the Minneapolis Daily Market Record.

⁴Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, and official records of the Department of Commerce. From July 1, 1944 to Feb. 28, 1946, and also from Nov. 1, 1946, wheat flour has been converted at the ratio of 100 pounds of flour to 2 33 bushels of wheat. The following conversion factors per 100 pounds of flour were used in the months of 1946 indicated: March, 2 282,021; April, 2 175,237; May, 2 182,072; June, 2 171,836; July, 2 179,789; August, 2 219,854; September, 2 201,673; and October, 2 226,700. Wheat flour converted to terms of grain on the following basis: 1929 to June 1944, 4.7 bushels of grain per barrel of flour.

⁵Includes flour milled from imported wheat.

⁶Includes wheat imported for milling in bond and export.

⁷Total exports (domestic plus foreign) minus total imports; beginning 1933, net figures are domestic exports minus imports for consumption.

⁸Net imports, i.e., imports for consumption minus domestic exports.

⁹Includes an allowance for unredeemed loans at average loan value.

¹⁰Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns. Data for 1899-1928 in Agricultural Statistics, 1942, table 1.

¹Years shown refer to year of harvest in the Northern Hemisphere. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow, thus the crop harvested in the Northern Hemisphere in 1946 is combined with the Southern Hemisphere harvest which began late in 1946 and ended early in 1947.

²Figures refer to harvested areas as far as possible.

³Preliminary totals, which in the case of production are rounded to the nearest million metric tons, and which in the case of area are rounded to the nearest million hectares. These figures are for countries shown and for other countries which include allowances for missing data for countries shown and for other producing countries not listed.

⁴Estimates for 1944 to date include Southern Dobruja and, therefore, are not strictly comparable with earlier years shown.

⁵Estimates for 1944 to date take account of boundary changes and, therefore, are not strictly comparable with earlier years shown.

⁶Official estimate adjusted to include Alsace-Lorraine.

⁷Figure for 1935 only.

⁸Beginning with 1933, production estimates for the U S R have been reduced 15 percent to take account of heavy harvesting losses.

⁹Average of less than 5 years.

¹⁰Estimates for Syria and Lebanon not shown separately prior to 1944.

¹¹British India only. Anatolia for other reporting territory has been included in the total for Asia.

¹²European cultivation only.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research and other information. Estimates for countries having changed boundaries have been adjusted to prewar boundaries except as noted.

³ Preliminary.

Bureau of Agricultural Economics. Data for 1925-28 in Agricultural Statistics, 1942, table 11, and data for 1929-36 in Agricultural Statistics, 1943, table 9.

Estimated production and stocks, by classes, are based on stocks of all wheat in each State, which data are broken down on basis of quinquennial wheat-variety surveys. Stocks are as of July 1 of the year given and are totals of stocks on farms, in interior mills, elevators and warehouses, in commercial centers and in merchant mills. Beginning 1942 the stocks include Commodity Credit Corporation wheat in transit and stored off farms in steel and wooden bins. Commercial stocks are reported by classes and merchant mill stocks are broken down largely on the basis of the distribution by classes of commercial stocks. Prior to 1937, some new wheat was included in the two latter positions; beginning 1937, only old crop wheat is shown in all stocks positions. Exports and shipments by classes estimated on the basis of "inspections for export" and from records of the War Food Administration and export indemnifying agencies.

¹ Estimated total based upon bureau of Census report of item, "In mills and mill elevators attached to mills."

² Foreign trade figures from reports of the Department of Commerce. Exports 1940 to date include military exports to Europe for relief and exports handled by War Food Administration. Imports include full-duty wheat, wheat imported for feed, and dutiable flour in terms of wheat. They exclude wheat imported for milling in bond and export as flour, also flour free for export.

³ Preliminary

⁴ Includes wheat used in mixed commercial feeds and wheat fed on farms other than where grown, as well as wheat fed on farms where grown. Balancing item.

⁵ Shipments to Alaska, Hawaii, Puerto Rico, and Virgin Islands.

⁶ For individual items see "Supply" section of this table.

⁷ Includes food used by United States military forces.

Bureau of Agricultural Economics

Costs for each year indicated are based on average wheat yields for that year, and on prevailing cost rates for labor, farm power, materials, equipment, and land rent during the year.

²Yield per acre is a weighted average.

³Includes the 6 New England States, New York, Pennsylvania, New Jersey, Delaware, Maryland, Virginia, West Virginia, and Kentucky.

⁴Includes North Carolina, South Carolina, Georgia, Alabama, Tennessee, and Arkansas.

⁵Includes Idaho, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, and California.

*Prior to June 1940 quoted as Soft White

Markets are Chicago, Minneapolis, Kansas City, St. Louis, Omaha, and Duluth

^Afloat or for early delivery

Market closed September 1939.

Fixed or ceiling price on wheat for domestic consumption

Bureau of Agricultural Economics. Compiled from following sources: Northwestern Daily Produce News; Bureau of Labor Statistics Wholesale Price Bulletins; reports of the Production and Marketing Administration; New York Journal of Commerce; Broomhall's Yearbook and Corn Trade News; Revista de la Bolsa de Cereales, La Nación, Buenos Aires, weeklies, Statistical Register of New South Wales, annual, Summary of the Australian Wheat Situation, and from trade papers published at various markets. Wheat prices at Minneapolis, St. Louis, Kansas City, and Chicago are weighted averages. Foreign prices are compiled in original currencies and units. Prices converted to cents per bushel of 60 pounds at current monthly rates of exchange as reported by the Federal Reserve Board (Canadian and English prices converted at par prior to September 1931). For earlier prices, see the 1928, 1930, and 1934 Yearbooks, tables 22, 25, and 18, and Agricultural Statistics, 1937 and 1939, tables 19 and 24

¹ Estimates of seeded acreage relate to the total acreage of rye sown for all purposes, including spring-sown rye.² Prices are from Minneapolis Daily Market Record and are averages of daily prices weighted by carlot sales.³ Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, and official records of the Department of Commerce. Rye--imports for consumption. Rye flour--imports for consumption, no exports reported since December 1932. Rye flour converted to rye on the basis that 1 barrel of rye flour is the product of 6 bushels of grain through 1943, beginning 1944 one barrel of flour is the product of 4.6 bushels of grain. Rye malt, no exports reported. Imports not separately reported prior to 1930. Converted to bushels of rye on basis that 1 bushel malt is the product of 1.1 bushel of grain through 1942. Beginning 1943, a bushel of malt equals a bushel of grain.⁴ Domestic exports minus imports for consumption.⁵ Net imports.⁶ Less than 500 bushels.⁷ Includes an allowance for unredeemed loans at average loan value.⁸ Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns.

Estimated world total ¹															

¹Years shown refer to year of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere, which immediately follow; thus, the crop harvested in the Northern Hemisphere in 1946 is combined with the Southern Hemisphere harvest which began late in 1946 and ended early in 1947.

²Figures refer to harvested areas as far as possible

³Estimates for 1944 to date include Southern Dobruja and, therefore, are not strictly comparable with earlier years shown.

⁴Estimates for 1944 to date take account of boundary changes and, therefore, are not strictly comparable with earlier years shown.

⁵Official estimates adjusted to include Alsace-Lorraine.

⁶Figure for 1935 only.

⁷Estimated totals, which in the case of production are rounded to the nearest

million, include allowances for missing data for countries shown and for other producing countries not listed.

⁸Beginning with 1933, production estimates for the U.S.S.R. have been reduced

⁹10 percent to take account of heavy harvesting losses.

¹⁰Average of less than 5 years

Office of Foreign Agricultural Relations Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research, and other information. Estimates for countries having changed boundaries have been adjusted to prewar boundaries except as noted.

¹Yield and production represent equivalent grain yield on total acres harvested for all purposes, i. e., grain, silage, fodder, hogged off, grazed, etc.

²Compiled from the Chicago Daily Trade Bulletin through May 1942, Chicago Journal of Commerce beginning June 1942, average of daily prices weighted by carlot sales, No. 3 yellow.

³Compiled from Monthly Summary of Foreign Commerce of the United States, and official records of the Department of Commerce. Corn--general imports 1929-32; imports for consumption beginning 1933. Corn meal--imports and reexports not separately reported, 1929-1932, imports reported beginning 1933. Corn meal converted to terms of grain on the basis of 4 bushels of corn to barrel of meal through December 1945, beginning Jan. 1946, 100 pounds meal is equivalent of 3.16 bushels grain. These data exclude a small amount of cracked corn imported beginning 1933.

⁴Total exports (domestic plus foreign) minus total imports. Beginning 1933 net exports are domestic exports minus imports for consumption.

⁵Yield of corn harvested for grain.

⁶Net imports--i. e., total imports minus total exports (domestic plus foreign). Beginning 1933 net imports are imports for consumption minus domestic exports.

⁷Includes an allowance for unredeemed loans at average loan value.

⁸Preliminary.

⁹Not a representative average, -93 percent of the sales occurred after removal of price control.

Bureau of Agricultural Economics. Italic figures are census returns. Data for 1899-1928 in Agricultural Statistics, 1942, table 62.

¹Years shown refer to year of harvest in the Northern Hemisphere. Harvests of the Northern Hemisphere countries are combined with the Southern Hemisphere harvests which follow; thus, the crop harvested in the Northern Hemisphere in 1946 is combined with the Southern Hemisphere harvest which began early in 1947.

Figures refer to harvested areas as far as possible.

²Figures for 1934 only.

³Average of less than 5 years.

⁴Estimated totals, which in the case of production are rounded to the nearest million, include allowances for missing data for countries shown and for other producing countries not listed.

⁵Estimates for 1944 to date include Southern Dobrudja and, therefore, are not strictly comparable with earlier years shown.

⁶Includes corn in mixed cultivation.

⁷Official estimates adjusted to include Alsace-Lorraine.

⁸Figure for 1935 only.
⁹Beginning with 1933, production estimates for U S R have been reduced 10 percent to take account of heavy harvesting losses.
¹⁰Figure for 1937 only.
¹¹European cultivation only.
¹²Figure for 1934 only.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research, and other information. Estimates for countries having changed boundaries have been adjusted to prewar boundaries except as noted.

¹ Estimates of seeded acreage relate to the total acreage of oats sown for all purposes including oats sown in the preceding fall

² Compiled from Chicago Daily Trade Bulletin through May 1942, Chicago Journal of Commerce beginning June 1942, average of daily quotations for No. 3 white, weighted by carlot sales

³ Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, and official records of the Department of Commerce Oats—general imports, 1929-32, imports for consumption beginning 1933 Oatmeal—imports for consumption Oats, unhulled, ground—imports for consumption, 1934 to date Oatmeal converted to terms of grain on the basis that 18 pounds of meal is the product of 1 bushel of oats through December 1942, and 13 17 pounds thereafter

⁴ Total exports (domestic plus foreign) minus total imports Beginning 1933, net exports are domestic exports minus imports for consumption

⁵ Net imports

Years shown refer to year of harvest in the Northern Hemisphere. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow, thus, the crop harvested in the Northern Hemisphere in 1946 is combined with the Southern Hemisphere harvest which began late in 1946 and ended early in 1947.

* Figures refer to harvested areas as far as possible ended early in 1947

Preliminary Figures for to Harvested areas as far as possible

Production and yield reported in bushels of 34 pounds

^b Average of less than 5 years.

*Average of less than 5 years.
†Estimated totals, which in the case of production are rounded to the nearest million, include allowances for missing data for countries shown and for other production countries not listed.
‡Estimates for 1944 to date include Southern Daburjia and, therefore, are not strictly comparable with earlier years shown.

ly comparable with earlier years shown

Estimates for 1944 to date take account of boundary changes and, therefore are not strictly comparable with earlier years shown
Official estimates adjusted to include Alsace Lorraine

Official estimates adjusted to include Alaska coastline
 Figure for 1935 only

Figure for 1933 only.
Beginning with 1933.

estimates for Syria include those for Lebanon cent to take account of heavy harvesting losses beginning with 1953, production estimates for the U.S.S.R. have been reduced 15 per

Estimates for Syria include those for Lebanon

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research, and other information. Estimates for countries having changed boundaries have been adjusted to prewar boundaries except as noted.

¹Costs for each year indicated are based on average oat yields for that year, and on prevailing cost rates for labor, farm power, materials, equipment, and land rent during the year

²Yield per acre is a weighted average

³Includes the 6 New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, Kentucky, and Tennessee

⁴Includes North Carolina, South Carolina, Georgia, Florida, Alabama, and Mississippi

⁵Includes Arkansas, Louisiana, Oklahoma, and Texas

⁶Includes Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon and California

¹Estimates of seeded acreage relate to the total acreage of barley sown for all purposes, including barley sown in the preceding fall²No. 3 barley, average of daily prices weighted by carlot sales, as reported in the Minneapolis Daily Market Record Replaces price previously reported for No. 2 malting³Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, and official records of the Department of Commerce Malt converted to terms of barley on the basis that 1 bushels of malt is the product of 1 bushel of barley through 1943, beginning 1944, 1 bushel malt equals 1 bushel grain Barley flour converted on the basis that 1 barrel of flour is the product of 9 bushels of barley⁴Imports for consumption⁵Domestic exports minus imports for consumption⁶Net imports⁷Includes an allowance for unredeemed loans at average loan value⁸Preliminary.

Bureau of Agricultural Economics Italic figures are census returns Data for 1899-1928 in Agricultural Statistics, 1942, table 103

[illegible]

* Years shown refer to year of harvest in the Northern Hemisphere. Harvests of the Northern Hemisphere are combined with the Southern Hemisphere harvests which immediately follow; thus, the crop harvested in the Northern Hemisphere in 1946 is combined with the Southern Hemisphere harvest which began late in 1946 and ended early in 1947.

* Figures refer to harvested areas as far as possible.

* Preliminary.

* Estimates for 1944 to date take account of boundary changes and, therefore, are not strictly comparable with earlier years shown.

* Official estimates adjusted to include Alsace-Lorraine.

* Figure for 1935 only.

* Beginning with 1933 production, estimates for U.S.R. have been reduced 15 percent to take account of heavy harvesting losses.

* Average of less than 5 years.

1. Estimates for Syria and Lebanon not shown separately prior to 1944

¹Consumption data for most grains are at the processing level.²Includes white, whole wheat, and semolina flour³Rice consumption for year beginning August previous to the year stated.⁴Table rice used by brewers excluded, beginning August 1934⁵Includes minor quantities of some corn products used in the manufacture of malt beverages. Total corn includes an allowance for the quantity used as hominy and grits.⁶Barley consumed in food products, excluding malt beverages, expressed in terms of malt equivalent. Includes quantities used as pearl barley, flour and malt extract.⁷The per capita civilian consumption was obtained by dividing the total apparent civilian consumption by the total population adjusted for under enumeration of children under 5 years of age and members of the armed forces not eating out of civilian supplies.
Preliminary

Production and Marketing Administration and Bureau of Agricultural Economics. Prices of corn and oats at Kansas City, Chicago, and Minneapolis were computed by weighting selling prices by reported number of carlots sold. Prices of barley and grain sorghum at Kansas City and of barley at Chicago and Minneapolis are average of prices at the close of each day. Prices at San Francisco are the average of prices on one day each week.

Production and Marketing Administration

CHAPTER II

STATISTICS OF COTTON, SUGAR, AND TOBACCO

Besides tables on cotton, sugar, and tobacco, this chapter includes tables on other fibers, sorgo sirup, maple sugar and sirup, honey, bees, and beeswax. Most cottonseed data, however, are in the chapter on oilseeds, fats, and oils.

New tables in this chapter this year are the summary historical table on sugar-beet seed, and one on production, foreign trade, and consumption of edible sirups. Sugar-beet statistics have been revised back to 1937 to include the fall-planted crop in California in the totals for the year of harvest instead of the year in which planted.

¹Department figures are in 500-pound gross-weight bales for all years. Agricultural census figures for all periods are in running bales.

²Gross weight price, including bagging and ties.

³New York prices from reports of the New York Cotton Exchange. New Orleans prices from reports of the New Orleans Cotton Exchange. These central-market prices are for middling grade, 7/8-inch staple, through 1939, beginning August 1940, prices are for 15/16-inch staple.

⁴Compiled from Monthly Summary of Foreign Commerce of the United States, January, June, and July issues and official records of the Department of Commerce.

⁵Equivalent bales of 500 pounds gross weight.

⁶Acreage in cultivation July 1 less removal of acreage reported by the Agricultural Adjustment Administration, less abandonment on area not under contract.

⁷Includes allowance for unredeemed loans at season average price or average loan value, whichever is higher.

⁸Imports for consumption, beginning January 1934; reexports not considered beginning this date.

⁹Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns. Production figures conform with census annual ginning enumerations. Data for 1899-1928 in Agricultural Statistics, 1942, table 136.

¹These estimates are intended to include the total cotton production in each country, as distinguished from estimates of the "commercial crop" (table 94), which exclude cotton consumed on hand spindles or in other ways, without entering commercial channels. Differences from year to year between these two series of production estimates for a given country may also occur because of changes in stocks of cotton on hand at the beginning and end of the cotton-marketing season, which changes are used in estimating the production of commercial cotton in many foreign countries.

²Includes Manchuria.³Bales of 500 pounds gross weight⁴Comparable data not available.⁵Preliminary

Office of Foreign Agricultural Relations. Prepared or estimated from official statistics of foreign governments, reports of the United States foreign service officers, and other information.

¹These estimates represent total acreage and production in each country (except India) including cotton consumed on hand seedlings or in other ways without entering commercial channels. For this reason they should average somewhat larger than estimates of the 'commercial crop'. (See table 94)

†Bales of 500 pounds gross weight, equivalent to about 478 pounds net; 480 pounds net in 1946 and thereafter

...Preliminary.

...Less than 500

...Includes estimates for minor-producing areas not listed above and allowances for estimates not available.

Office of Foreign Agricultural Relations Prepared and estimated from official statistics of foreign governments, reports of United States foreign service officers, and other information.

¹Includes only raw cotton produced for factory consumption and does not include large quantities grown in India and China and to some extent in other countries for consumption on handspindles or for use in other non-commercial ways. For this reason, and because of differences in the methods of determining the quantities involved and differences in bale weights in the case of American, the estimates of the production of commercial cotton do not agree with the estimates of what might be called the "agricultural crop." The latter estimates (table 92) are in all cases given in bales of approximately 478 pounds net (until 1946) and are comparable with the estimates of acreage and yield.

²American in running bales (counting round bales as half bales); foreign, in bales of approximately 478 pounds net through 1946, since then 480 pounds.

³Preliminary.

⁴Excludes cotton accidentally destroyed by fire, lost or damaged in transit or rendered unusable from other causes, it is estimated that from 35,000 to 183,000 bales of American were destroyed each year in the seasons shown here, and 100,000 bales of foreign destroyed in 1937-38 and 1940-41, and 59,000 bales in 1939-40, and 50,000 in 1941-42.

Bureau of Agricultural Economics. Compiled from reports of the New York Cotton Exchange Service and estimates of the Department of Agriculture. Data for 1920-36 in Agricultural Statistics, 1942, table 146.

1947 ⁴	132	2,530

¹Ginnings during the 12 months, August 1 through July 31. Includes an allowance for "city crop" which consists of rebaled samples and pickings from cotton damaged by fire and weather.

²Total imports minus reexports.

³Total exports minus reimports.

⁴Supply exceeds distribution.

⁵Preliminary.

Production and Marketing Administration. Compiled from reports of the Bureau of the Census. American in running bales, counting round as half bales, and foreign in equivalent bales of 500 pounds.

¹Computed by weighting the quantity in each grade by the 1937-39 average price per pound for such grade of 15/16-inch staple. Converted to an index on basis Middling White equals 100.

²Averages calculated on numerical equivalents of the staple-length designations. For example 7/8: 28, 29/32: 29, etc.

³Illinois and Kentucky

¹Costs for each year indicated are based on average yields of cotton lint (gross weight) for that year and on prevailing cost rates for labor farm power, materials, equipment, and land rent during the year.

²Obtained by dividing the production of lint in terms of 500-pound bales by the acreage harvested.

³Costs for 1941-45 inclusive are for upland cotton only.

⁴Includes the lower and upper Coastal Plain of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and the black prairie belt of Alabama and Mississippi.

⁵Includes the rolling and hilly uplands of Virginia, North Carolina, South Carolina, Georgia, and Alabama, which border the Blue Ridge Mountains on the east and south.

⁶Includes Tennessee exclusive of Lake County, the hilly cotton lands of northern Mississippi, northern Alabama and northern Georgia, and western North Carolina.

⁷Includes the principal bottom lands of the Mississippi, Arkansas, and Red Rivers.

⁸Includes the hilly lands of Arkansas, Louisiana, southern Missouri, eastern Texas, and eastern Oklahoma.

⁹Includes the Gulf Coast prairie of Texas and Louisiana, and the black wax prairie of Texas.

¹⁰Includes the dry-land areas of western Oklahoma, western Texas, and eastern New Mexico.

¹¹Includes the irrigated cotton lands of California, Arizona, New Mexico and Texas.

¹²Includes the 16 States of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Mississippi, Louisiana, Arkansas, Missouri, Oklahoma, Texas, New Mexico, Arizona, and California.

Bureau of Agricultural Economics. For sources and methods of computation, see Agricultural Statistics, 1942, tables 158 and 159, except for prices in England since April 1941. Since the closing of the Liverpool market on March 31, 1941, and the initiation of the Government purchasing program, prices have been established by the Cotton Controller. These prices are from "Cotton," the official journal of the Manchester Cotton Association, Ltd., and represent the prices to mills for cotton supplied by the British Purchasing Agency.

Production and Marketing Administration Compiled from the Rayon Organon of the Textile Economics Bureau, Inc. Rayon is defined as "a man-made textile with a cellulose base." Production of Nylon, Vinyon, casein fibers, and other synthetic fibers, which are made basically from substances other than cellulose, not included.

Figures by countries for the period 1940-45 are on a pre-war boundary basis. Figures for Germany, Italy, Russia, and various other European countries are fragmentary and partially estimated. The data for these years and countries may be subject to considerable revision.

¹Program payments represent gross payments for sugar beets marketed before applying penalties which were imposed in several years and before deducting county association expenses which were charged payments with respect to crop deficiency and acreage abandonment have not been included. See table 709 for amounts of abandonment and deficiency payments. Amounts shown are based upon conditional payments under the Sugar Act of 1937, computed at the basic rate before adjusting for reduction applicable to large producers as provided for in Section 304 (c). Support payments in 1943-45 were made under the War Food Administration program.

¹The growth of 9 months in Louisiana and 12 months in Florida. Sugar campaign usually ends by December or early January in Louisiana and in Florida by March following the season of growth.

²Prices do not include Government payments under the Sugar Act. Price support payments for 1943-45 are included. See table 124.

³Calculated by the Agricultural Adjustment Administration method (S. R. Series 1, No. 1.)

⁴Calculated on the basis that 100 pounds of raw sugar is required to produce 93.46 pounds of refined sugar. (See table 136.)

⁵Strap production not included.

⁶Preliminary.

Bureau of Agricultural Economics. Of the total sugar produced in Louisiana about 25 percent consists of direct consumption sugar, the balance "as made" without further refining. Data for 1909-28 in Agricultural Statistics, 1942, table 175.

¹ Preliminary.² The growth of 9 months in Louisiana and 12 months in Florida. Sugar campaign usually ends by December or early January in Louisiana and in Florida by March following the season of growth.³ Includes price support payments of \$1.45 per ton in 1945. Does not include Government payments under the Sugar Act of \$1.28 per ton in 1945 and approximately \$1.26 in 1946.⁴ Calculated by the Agricultural Adjustment Administration method (S R Series 1, No.1).⁵ Calculated on the basis that 100 pounds of raw sugar is required to produce 93.46 pounds of refined sugar.⁶ Includes 15,181,000 gallons of edible molasses in 1945 and 13,589,000 gallons in 1946.⁷ Edible molasses not produced in Florida, therefore the Florida figures are for blackstrap.

¹Made under the Commodity Credit price assistance program.²Representing gross payments relative to sugarcane marketed before applying penalties which were imposed in 1940 and before deducting county association expenses which were charged in all years, payments with respect to crop deficiency and acreage abandonment not included.³Conditional payments under the Sugar Act of 1937 computed at the basic rate before adjusting for reductions applicable to large producers as provided for in sec. 304 (c). Does not include payments of about 20 cents per ton of cane made in 1937 under the Soil Conservation and Domestic Allotment Act. The basic rate of payment increased from 60 to 80 cents per 100 pounds of sugar in 1942.⁴Preliminary.

Bureau of Agricultural Economics. Payments under Federal sugar program computed by Sugar Branch of Production and Marketing Administration.

¹Harvesting season begins about Nov. 1, the length of the growing season being about 11 months.²Calculated cane production divided by acreage.³Calculated cane production is the sum of the estimated quantities of cane used for the production of the various kinds of sugar and basis. The quantity of cane ground for the production of centrifugal sugar is estimated in the basis of the reported yield of sugar per ton of cane. The quantity of cane ground for the production of muscovado, panocha, and basis is estimated on the basis of assumed ratios of juice extraction between the small mills and centrals.⁴Preliminary.

Office of Foreign Agricultural Relations. Compiled from reports of Philippine Department of Agriculture and Commerce.

¹Years shown are crop years, generally the harvesting season begins in the fall months of the year shown or in the early months of the following year, except in certain cane-sugar-producing countries in the Southern Hemisphere, such as Australia, Argentina, Mauritius, Union of South Africa, etc., where the season begins in May or June of the year shown.

²Preliminary.

³Data not comparable with previous years because of boundary changes.

⁴Includes a small quantity of cane sugar.

⁵Includes Latvia and Lithuania.

⁶Included in India.

⁷Data for India are in terms of gur, a low grade of brown sugar. Includes Burma 1930-34 only.

⁸Includes cane and beet sugar.

⁹Data are for the calendar years following the years shown.

¹⁰Includes centrifugal and muscovado sugar.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign-service officers, results of office research and other information. Estimates of countries having boundary changes have been adjusted to prewar boundaries except as noted. Data for some countries, including Yugoslavia, obtained from the Statistical Bulletin of the International Sugar Council in London.

1946 ¹⁰ ...	955	1,948

¹Beginning 1935, includes stocks of raw and refined sugar held by refiners, by importers and distributors of direct consumption sugar, and by beet-sugar factories, as reported by the Sugar Branch, U.S. Department of Agriculture. Beginning 1940, includes stocks held by importers. Stocks on July 1, 1940, comparable to July 1, 1939, totaled 2,045,506 tons.

²Beet and cane sugar only. Beet converted to raw at the rate of 1.07 tons raw to 1 ton refined.

³Shipments from Hawaii, Puerto Rico, and the Virgin Islands and duty-free imports from the Philippine Islands.

⁴Imports for consumption. No account taken of sugar imported in other forms. Does not include imports from the Philippine Islands.

⁵Shipments to Hawaii, Puerto Rico, and Alaska included, and to Virgin Islands beginning January 1935.

⁶Direct exports to foreign countries through customs districts of noncontiguous Territories excluded.

⁷Sugar used in the manufacture of other commodities for export, on which drawback was paid, taken into account.

⁸Beginning July 1941, includes sugar available for military services, both in the United States and abroad.

⁹Based on estimates of total population, January 1

¹⁰Raw sugar converted to refined by multiplying by the following factors: Hawaii 0.9617, Puerto Rico, Philippines, and Virgin Islands 0.946; Cuba and all others 0.9418. Use reciprocal of above factors to reduce refined sugar to raw.

¹¹Preliminary.

Office of Foreign Agricultural Relations. Trade figures from the monthly summary of Foreign Commerce of the United States and unpublished records of the Bureau of the Census. Data for earlier years in Agricultural Statistics, 1941, table 206, and Agricultural Statistics, 1942, table 185.

¹Raw sugar imported for direct consumption has been converted to refined basis. Stocks include sugar in bond and in customs custody and control.

²Sugar for direct consumption only. All sugars converted to refined basis.

³Preliminary.

⁴Includes sales for export. The Department of Commerce reported exports of refined sugar amounting to 70,191 tons in 1937, 61,826 tons in 1938, 124,554 tons in 1939, 167,923 tons in 1940; 66,167 tons in 1941. Deliveries for export during subsequent years were 194,911 tons in 1942; 436,312 tons in 1943, 292,953 tons in 1944, 271,621 tons in 1945, and 376,850 tons in 1946.

⁵Larger than actual deliveries by a small amount representing losses in reprocessing, etc.

⁶Excludes raw sugar delivered by refiners for direct consumption as follows: 1937, 13,946 tons; 1938, 10,480 tons; 1939, 6,176 tons; 1940, 7,779 tons; 1941, 8,573 tons; 1942, 5,587 tons; 1943, 15,196 tons; 1944, 9,875 tons; 1945, 5,021 tons; and 1946, 3,939 tons.

Sugar Branch, Production and Marketing Administration. Compiled in the Administration of the Jones-Costigan Act, Public Res. No. 109, and the Sugar Act of 1937 from reports by cane-sugar refineries, beet-sugar factories, importers of direct-consumption sugar, and continental cane-sugar mills.

TABLE 135 --Sugar (cane and beet) Total and per capita civilian consumption, United States, 1929-46

Calendar year	Total, raw basis	Per capita, refined basis	Calendar year	Total, raw basis	Per capita, refined basis
	1,000 short tons	Pounds		1,000 short tons	Pounds
1929	6,317	97 0	1938	6,645	95 0
1930	7,221	109 1	1939	6,908	98.0
1931	6,669	99 9	1940	6,763	95 2
1932	6,321	94 1	1941	7,350	103 7

¹ Production of cane sirup, sorgo sirup, and edible molasses is of the fall of the preceding year² Does not include varying quantities produced on nonfarm lands in Somerset County, Maine³ From 1929 to 1942 inclusive, figures for odd years (except 1941) are from the Bureau of the Census, for even years (and 1941) quantities are estimated. Data for 1943-46 from the Sugar Branch, United States Department of Agriculture⁴ Data for 1939-46 are official figures of Bureau of Agricultural Economics, previous years' estimates are unofficial.⁵ Preliminary⁶ Assumed to be largely refiners' sirup

Office of Foreign Agricultural Relations.

¹Preliminary.²10-year average, but imports from this country actually occurred in only a few of the 10 years. For example, a total of 46,000 pounds of honey was imported from Dominican Republic during 1937 and 1940, none during the remaining 8 years.³Withdrawn from warehouse; imported prior to the year to which it is credited⁴Less than 500 pounds; imports from this area did not occur in all of the 10 years.

¹ Production, exports, and imports are not comparable, i.e., production figures are on a farm-sales-weight basis, whereas exports and imports are on a declared-weight basis.

² Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, and official records of the Department of Commerce; includes stems and trimmings.

³ Total exports (domestic plus foreign) minus imports. Beginning 1933 domestic exports minus imports for consumption.

⁴ Beginning 1933, imports for consumption.

countries mentioned ^{1a}	6,309	7,492	5,722,071	6,515,760

^aTobacco produced by the natives.

^{1a}Estimates based upon official data for area and a yield of approximately 402 pounds per acre (used in official estimates of native production in later years).

^{1b}Less than 500 acres.

^{1c}Including estimates of missing data.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments and reports of United States foreign service officers. Data for some of the averages were obtained from publications of the International Institute of Agriculture.

^{1a}Harvests of Northern Hemisphere countries are combined with the next spring harvest in Southern Hemisphere countries; thus, the crop harvested in the Northern Hemisphere during the last half of 1945 is combined with the Southern Hemisphere crop harvested during the first half of 1946.

^{1b}Preliminary figures calculated from actual data; not rounded figures.

^{1c}Exports.

^{1d}Less than a 5-year average.

^{1e}Data not comparable with earlier years because of boundary changes.

^{1f}Free China.

^{1g}British India and reporting native states.

^{1h}The Estate tobacco is produced principally by Europeans.

1947	838	776	681						

¹Stocks as here shown have been converted to a farm-sales weight basis,-- the equivalent of weight at the time of sale by growers,-- thereby making these figures of leaf-tobacco stocks comparable with figures of leaf-tobacco production.

²Stocks on the Island of Puerto Rico are included.

³Stocks of Cuban tobacco, type 81, are not converted to farm-sales weight but are shown on an unstemmed weight basis. Stemmed stocks reported have been converted to an unstemmed equivalent. A factor for converting to farm-sales weight has not been determined.

Production and Marketing Administration. Data for 1939-42 in Agricultural Statistics, 1946, table 155

TABLE 156 -- Tobacco Leaf used in cigars, cigarettes, and tobacco and snuff, 1939-1947

¹Simple average of weekly prices; usually the Tuesday quotation. All prices include the internal-revenue tax.

²Composite price of 3 price series, f.o.b. destination.

³Composite price of 6 series, f.o.b. destination, representing an average of popular-priced cigars.

⁴New York.

⁵2-ounce package, destination.

⁶Dry, sweet 1½-ounce, list price, destination.

⁷Estimated.

⁸Not comparable to years prior to 1941.

Bureau of Agricultural Economics. Compiled from official records of the Bureau of Labor Statistics, Department of Labor.

STATISTICS OF OILSEEDS, FATS, AND OILS

There are three new tables on soybeans in this chapter this year, covering farm stocks, supply and distribution, and inspections. The quarterly series on farm stocks of soybeans began July 1, 1942. Some data on fats, oils, and oilseeds produced abroad are in the chapter on foreign trade. Butter statistics in general are included with other dairy products. Lard statistics are mostly in the chapter on livestock.

¹Average of daily prices weighted by carlot sales, compiled from Minneapolis Daily Market Record²Compiled from Monthly Summary of Foreign Commerce of the United States, January and June, and official records of the Department of Commerce. Flaxseed, general imports 1929-32, imports for consumption beginning 1933. Linseed oil, general imports 1929-32, imports for consumption beginning 1933. No re-exports of seed or oil reported since December 1922. 1 bushel of flaxseed weighs 56 pounds, 1 bushel of seed yields approximately 2 1/2 gallons of oil, and 1 gallon of oil weighs about 7 1/2 pounds.³Total imports minus exports. Beginning 1933 imports for consumption minus domestic exports.⁴Beginning 1933, imports for consumption⁵Includes an allowance for unredeemed loans at average loan value.⁶Net exports.⁷Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns. Data for 1899-1928 in Agricultural Statistics, 1942, table 220.

¹Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow, thus, the crop harvested in the Northern Hemisphere countries in 1946 is combined with the Southern Hemisphere harvest which began late in 1946 and ended in 1947.

²Preliminary.

³Includes estimates for the above countries for which data are not available and for minor producing countries.

⁴Acreage includes area for fiber.

⁵Beginning with 1944, figures include Southern Dobrudja.

⁶Average of less than 5 years.

⁷Flax and hemp.

⁸Sown area.

⁹Officially reported figures, plus Indian official estimates for unreported tracts except in the years 1944-46 inclusive, when no estimates for unreported tracts were available.

¹⁰Sown area. Normally the harvested area represents from 75 to 90 percent of the sown area.

¹¹1935 only.

¹²Yield calculated from seed acreage only.

¹³Includes seed from fiber flax.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research, or other information. Estimates for countries having changed boundaries have been adjusted to prewar basis except as noted.

1946 ⁶	3,916	4,172	1,036	3,136	649 0	2,036,430	9 12	185,807				

¹Acres grown alone, plus one-half the interplanted acres

²Mostly hogged

³For data on peanut vine hay, see table 360.

⁴Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, trade data are on the basis of "in the shell," converted at ratio of 1 to 1½, beginning 1945, at 1 to 1.55

⁵Re-exports taken into consideration in years 1929 to 1932 inclusive

⁶Net exports.

⁷Imports for consumption beginning 1933

⁸Excludes 3,371,850 pounds "free for export."

⁹Preliminary.

¹Crop year begins about Nov 1 in the Virginia-North Carolina section, in September in the Southeastern States, and in August in the Southwestern States

²The Office of Price Administration on Feb 27, 1943, established per-pound ceiling prices as follows: Virginia-North Carolina Jumbos and Fancys, 15 1/4 cents, shelled Virginia extra large and medium, 16 1/4 cents, No 1's, 14 5/8 cents, Southeastern shelled No 1 Spanish, 14 1/4 cents, Runners, 14 cents, Southwestern shelled Spanish No 1's, 14 1/2 cents

³Under the 1944-45 peanut program, all No. 2's were crushed for oil, sales to the edible trade were forbidden

¹Production of unhusked air-dried nuts²Preliminary³Includes small quantities of tung nuts produced in Texas⁴Prices and values for these 2 States have been combined, to avoid the possibility of disclosing individual mill operations.

Bureau of Agricultural Economics The Census of Agriculture reported 351,000 tung trees in Southern States in 1930, 12,671,000 tung trees in 1940, and 9,583,000 tung trees in 1945. In addition to the States listed above, the census shows a small production also in Texas and South Carolina. The yield of oil from tung nuts varies from year to year but is usually estimated at around 16 percent of the weight of the nuts. Production and supply of tung oil appear in table 193

¹Partly estimated. 1942-45 includes Department of Agriculture shipments to United States Territories not reported by Bureau of the Census.

²Less than 500 pounds.

³Preliminary.

⁴Average for less than 12 months.

Bureau of Agricultural Economics. Compiled as follows: Production and stocks from Bureau of the Census, Animal and Vegetable Fats and Oils.

Trade figures from Foreign Commerce and Navigation of the United States, and records of the Bureau of the Census.

Disappearance: Total, computed from data on production, trade, and stocks. Per capita, computed from total disappearance, using population as of July 1, including military personnel.

Price, from reports of the Production and Marketing Administration. Based on products containing from 20 to 50 percent animal fat. 1937-June 1940, quoted in hardwood tubs; beginning July 1940, in 1-pound cartons.

1946 ⁴	8,848	815	691	52	1,266	9,403	9,280

¹ Imports for consumption² Reexports include only items imported free of duty or tax (coconut, palm, including palm-kernel, and tung oils), except that in 1943, 1944, 1945, and 1946 certain quantities of whale, linseed, and sunflower oils reported in imports for consumption are also included³ Special programs of the U.S. Department of Agriculture included, 1942-45⁴ Cold-storage stocks of butter, all years, lard, 1937-40.⁵ Disappearance of primary fats and oils in continental United States adjusted for fat content of imports, exports, and shipments to U.S. Territories of margarine, shortening, and soap (including military procurement for civilian relief abroad and Red Cross procurement of margarine and soap), and changes in stocks of margarine and shortening.⁶ Adjusted to allow for changes in cold-storage stocks of butter held by the armed forces, and in U.S. Department of Agriculture stocks of lard in transit to warehouses and ships (these stocks are not included in factory and warehouse stocks)⁷ Preliminary⁸ Includes 9,000,000 pounds of dehydrated castor oil (crude basis), these stocks were not reported prior to 1942⁹ Includes procurement for U.S. armed forces, as well as disappearance into civilian trade channels.

Bureau of Agricultural Economics Production from domestic materials, 1940-45 revised on the basis of new estimates of lard production outside of federally inspected plants Compiled as follows: Production, from reports of the Bureau of the Census, U.S. Department of Agriculture, and Fish and Wildlife Service Foreign trade from Foreign Commerce and Navigation of the United States and records of the Bureau of the Census Stocks from Bureau of the Census and U.S. Department of Agriculture. Disappearance computed from data on production, foreign trade, and stocks. Totals computed from unrounded numbers.

¹Preliminary

²Reported factory consumption in paints, varnishes, linoleum, oilcloth, printing inks, and miscellaneous industrial products 1937-41, estimated.

Bureau of Agricultural Economics These estimates have been revised to include consumption in core oils, synthetic resins, coated fabrics other than oilcloth, insulation, packings, linings, and protective coatings such as caulking compounds Also included, as formerly, is consumption in paints, varnishes, linoleum (including felt-base floor coverings), oilcloth, and printing inks

Compiled from reports of the Bureau of the Census and the Fish and Wildlife Service, as follows

Linseed, castor, fish, soybean, tung, oilseeds, and perilla oils - Total apparent domestic disappearance, minus quantities (if any) reported by the Bureau of the Census as used in soap, oleomargarine, and shortening, and minus part of the quantity used in miscellaneous industrial products Details of the computation are given in the Fats and Oils Situation, April-May 1947, page 18

Other fats and oils - Factory consumption in paints, varnishes, linoleum (including felt-base floor coverings), oilcloth and printing inks, as reported by the Bureau of the Census

TABLE 203.--Fats, oils, and rosin used in the manufacture of soap, United States, 1939-46

¹Preliminary.²Beginning 1941, includes rendered pork fat³Inedible animal stearin, grease (lard) oil, tallow oil, foots and other soapstock, red oil, stearic acid, and other fatty acids. Tallow oil also included after 1942. Before 1943, estimated from total factory consumption of these items.⁴1939-42, consumption of rosin was reported on a crop year basis (April-March); data are placed in calendar year in which most of the season occurs, i. e., 1942-43 data are placed in the calendar year 1942. 1943-46, computed from quarterly reports.

Bureau of Agricultural Economics. Compiled as follows: Fats and oils, Bureau of the Census; rosin, Naval Stores Research Division, U. S. Department of Agriculture.

Total apparent disappearance	58,610	15,688

¹Preliminary.
²No 1, No 3, and dehydrated (sulphonated excluded). To avoid double counting, the estimated quantity of No 1 used in the production of dehydrated (85,981,000 pounds in 1944, 51,495,000 pounds in 1945, and 30,306,000 pounds in 1946) is deducted from the reported factory consumption of No 1 in miscellaneous products. 113 6 pounds of No 1 castor oil are estimated to be required for production of 100 pounds of dehydrated.
³Includes 7,769,000 pounds used for pressing in 1944, 750,000 pounds in 1945, and 730,000 pounds in 1946.
⁴Revised.
⁵Includes 26,000 pounds used for pressing in 1944, 101,000 pounds in 1945, and 48,000 pounds in 1946.
⁶Includes oleo stock.
⁷Includes 2,092,000 pounds of oleo stock in 1944, 1,304,000 pounds in 1945, and 331,000 pounds in 1946.
⁸Includes 35,654,000 pounds used in the tin and ternplate industry in 1944, 37,300,000 pounds in 1945, and 36,443,000 pounds in 1946.
⁹Includes colzae-kernel, marmaruk-kernel, ouricuri-kernel, and tucum-kernel oils.
¹⁰Reported factory consumption used to represent total apparent disappearance.

¹¹Includes cottonseed stearine, sunflower oil, soybean stearine, and soya and soya stearine flakes in 1944, cottonseed stearine, cottonseed flakes, sunflower oil, soybean stearine, and soya flakes in 1945, 16 000 pounds of soybean stearine, 16,000 pounds of cottonseed flakes, and 35,000 pounds of soya flakes in 1946.

¹²Includes 99,114,000 pounds used in pressing in 1944; 111,784 000 pounds in 1945, and 82,320,000 pounds in 1946.
¹³Includes 487,000 pounds used in refining in 1944, 632,000 pounds in 1945, and 400,000 pounds in 1946.

Bureau of Agricultural Economics Compiled as follows
 Factory consumption, from reports of the Bureau of the Census, except oleomargarine, from reports of the Bureau of Internal Revenue. Refining is the difference between use of crude oils in refining and the production of refined oils. Total apparent disappearance computed from data on production, foreign trade, and stocks, as follows: Products of the U. S. Department of Agriculture Marine-animal oils, Fish and Wildlife Service Other fats and oils, Bureau of the Census Trade and Stocks, Bureau of the Census

¹Mainly salad and cooking oils. Includes all oils and fats (other than butter, lard, oleomargarine or shortening) used in mayonnaise and salad dressing, bakery goods, confectionery, commercial roasting and frying, etc.

²Including only the fat content of butter, estimated at 80.5 percent of total weight.

³Revised on the basis of new estimates of lard production outside of federally inspected plants.

⁴Preliminary.

⁵Soap used in manufactures (rubber, textiles, etc.) is included with "Other industrial products."

⁶Paints, varnishes, floor coverings, oilcloth, printing inks, core oils, synthetic resins, insulation, linings, packings, coated fabrics (other than oilcloth), caulking and other protective coatings.

Bureau of Agricultural Economics. Computed from data given in reports of the Bureau of the Census, Fish and Wildlife Service, and Department of Agriculture. Totals computed from unrounded numbers.

¹Multiply by this factor to convert to the basis of 1924-29:100, which is the base given in Technical Bulletin No 737

Bureau of Agricultural Economics Index numbers for earlier years, beginning 1910, are given in The Fats and Oils Situation, January-February 1946

STATISTICS OF FRUITS, VEGETABLES, MELONS,
TREE NUTS, AND BEVERAGE CROPS

These crops are arranged in four groups: Fruits and berries; vegetables and melons, tree nuts; and beverage crops (coffee, tea, and cacao beans). This is the first year since 1942 that Agricultural Statistics has carried data on exports of coffee, tea, and cacao beans by country of origin. Summary tables on inspections, unloads, and cold-storage holdings of both fruits and vegetables are near the end of the chapter.

FRUITS

Estimates of fruit production pertain to the harvested crop and for some years include quantities not harvested because of low prices or other economic factors. Losses from natural causes, such as windstorms, freezes, etc., are not included in production. Production relates to the total crop produced on farms, including commercial and home production, except for apples and strawberries for which the production relates to commercial areas only. The annual estimates are checked and adjusted at the end of each marketing season on the basis of shipment and processing records from transportation agencies, processors, cooperative marketing associations, and other industry organizations. The estimates are reviewed (and revised if necessary) at 5-year intervals, when census data show the numbers of trees and harvested production of fruits by kinds, in each State and county. The estimates for census years do not always agree with census data because of allowances for economic abandonment and the varying degree of completeness in the census data. Census data are more likely to be incomplete for types of crops which occur only infrequently in any locality. However, the Department's available statistics are limited to the major tree fruits and nuts and to grapes, cranberries, and strawberries.

¹ Estimates of the commercial crop refer to the total production of apples in the commercial apple areas of each State. Since 1938, official estimates of apple production have been restricted by law to the commercial crop of the United States. Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, and Office of Records of the Department of Commerce. ² Imports and exports are in terms of fresh apples on following basis: 1 pound of dried is equivalent to about 7 pounds fresh through 1942 (beginning 1943, 1 pound dried is equivalent to 8 pounds fresh). 1 pound of canned is equivalent to about 2 pounds fresh, 48 pounds fresh equals 1 bushel. No re-exports reported.

³ Excludes apple waste.

⁴ Includes apple waste. ⁵ Beginning January 1933 includes apple waste, not separately reported prior to this date. ⁶ Total exports (domestic plus foreign) minus imports. Beginning 1933, domestic exports without imports for consumption. ⁷ Beginning 1933, imports for consumption. ⁸ Preliminary.

Bureau of Agricultural Economics. *Italic figures are census returns of harvested production.* Data for 1909-28 in Agricultural Statistics, 1944, table 189.

¹Estimates of the commercial crop refer to the total production of apples in the commercial apple areas of each State

²For some States in certain years, production includes some quantities unharvested on account of economic conditions. In 1944, estimates of such quantities were as follows (1,000 bushels): Massachusetts, 91; Rhode Island, 23; Connecticut, 58; New York, 316; Pennsylvania, 273; Virginia, 312; West Virginia, 98; North Carolina, 53; Montana, 10; Utah, 12; in 1946, Virginia, 100. Prices apply only to the harvested portion of the crop

³Preliminary

⁴Includes the following quantities harvested but not utilized due to abnormal cullage (1,000 bushels): In 1944, New York, 250; New Jersey, 46; Delaware, 24; Maryland, 12; Virginia, 100; Ohio, 100; Michigan, 150; Idaho, 36; Colorado, 60; Utah, 17; in 1946, New York, 227; Virginia, 100; Idaho, 20; Colorado, 20; Utah, 40.

¹Of the 43 States reported in the 1940 census as producing apricots, California, Washington, and Utah had 98 percent of the production.²Includes the following quantities unharvested on account of economic conditions

(tons) California, 1930-9,000, 1931-4,000, 1932-13,000, 1939-8,000, 1942-5,000, Washington, 1934-2,000, 1935-1,200, 1938-2,200, 1939-300, 1940-500, Utah, 1945-550.

³Price and value apply only to the harvested portion of the crop.⁴Net processed weight.⁵Dried apricots are 12 1/3 percent of total dried fruit for salad.⁶Exports of dried fruit converted to unprocessed dry weight by dividing by 1.07.

Bureau of Agricultural Economics

Exports compiled from records of De-

partment of Commerce

Unprocessed dry weight converted to terms of fresh fruit on the basis of 5.5 tons fresh to 1 ton dried. Canned converted to fresh at ratio of 55 cases (45 pounds each) picked from 1 ton of fresh fruit through 1938, beginning 1939 at ratio of 60 cases to 1 ton.

Less than 1 ton

¹For some States in certain years, production includes some quantities unharvested on account of economic conditions. In 1945 and 1946, estimates of such quantities were as follows (tons): 1945 - Oregon sweet, 1,100; 1946 - Oregon sweet, 1,000; Idaho sour, 50. Prices apply only to the harvested portion of the crop.

²Preliminary.

³Short-time average.

⁴Equivalent returns per ton for bulk fruit at the packing-house door.

⁵Equivalent returns per ton for bulk at the first delivery point.

⁶Includes 110 tons harvested but not utilized, due to abnormal cullage.

Bureau of Agricultural Economics.

1946 ⁷	170	170	3 95	672	28			

¹Season begins with the bloom of the year shown and ends with the completion of harvest the following year. In California picking usually extends from about Oct 1 to Dec 31 of the following year. In other States the season begins about Oct 1 and ends in early summer, except for Florida limes, harvest of which usually starts about Apr 1

²Estimates of production include fruit consumed on farms, sold locally, and used for manufacturing purposes, as well as that shipped. Fruit ripened on the trees but destroyed by freezing or storms prior to picking is not included. For weight of boxes see pp 4 and 5

³Prices are equivalent returns per box at the intake packing-house door for all methods of sale. Prices are State averages, weighted by production rather than by sales to obtain United States average

⁴Includes quantities used for juice, concentrates, grapefruit segments, and other citrus products. In some seasons, includes appreciable quantities of oranges and lemons in California delivered to processing plants which were not utilized, but for which growers received payment

⁵Imports converted to boxes on the following basis: Oranges, 90 pounds per box, grapefruit, 80 pounds per box, lemons, 76 pounds per box, limes, 80 pounds per box

⁶Less than 500 boxes

⁷As estimated from prospects on Oct 1, 1947

⁸Imports include pomeloes, beginning Jan 1, 1941

⁹Exports include limes, beginning Jan 1, 1941

Bureau of Agricultural Economics Trade data from official records of the Department of Commerce. Data for 1919-28 in Agricultural Statistics, 1942, table 291

¹Production estimates relate to the crop from bloom of year shown. Harvesting in Northern Hemisphere countries begins about November and in Southern Hemisphere countries about February of the following year.

²Preliminary.

³Includes Syria.

⁴Included in Lebanon.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign-service officers, results of office research, and other information. Production in the United States in terms of boxes of the following weights: Oranges, Florida and Texas, 90 pounds; California, 77 pounds; grapefruit, Florida and Texas, 80 pounds; California, 68 pounds; lemons, 79 pounds. Production in foreign countries converted to boxes of the following weights: Oranges, 70 pounds; grapefruit, 80 pounds; lemons, 76 pounds. For earlier data, see Agricultural Statistics, 1945, table 212.

¹Season begins with the bloom of the year shown and ends with the completion of harvest the following year. In California picking usually extends from about Oct. 1 to Dec. 31 of the following year. In other States the season begins about Oct 1 and ends in early summer, except for Florida limes, harvest of which usually starts about Apr 1. Estimates of production include fruit consumed on farms, sold locally, and used for manufacturing purposes as well as that shipped. Fruit ripened on the trees but destroyed by freezing or storms prior to picking is not included. For some States in certain years, production also includes some quantities donated to charity, unharvested, and/or eliminated in accordance with provisions of marketing agreements. In 1944, 1945, and 1946 estimates of such quantities were as follows (1,000 boxes): 1944 - Oranges, California navels and miscellaneous, 533; Valencias, 1,088; Grapefruit, California desert valleys, 3; Tangerines, Florida, 150; 1945 - Oranges, California navels and miscellaneous, 332; Valencias, 399; Grapefruit, desert valleys, 2; 1946 - Oranges, California navels and miscellaneous, 485; Valencias, 342; Florida, early and midseason, 900; Tangerines, Florida, 800; Grapefruit, Florida, Seedless, 800; Other, 1,800; California Desert Valleys, 18.

²As estimated from prospects on Oct. 1, 1947.

³Equivalent returns per box at the intake packing-house door for all methods of sale.

⁴Includes small quantities of tangerines.

⁵Net content of box varies. In California and Arizona the approximate average for oranges is 77 lb. and grapefruit 65 lb. in the desert valleys; 68 lb. for California grapefruit in other areas; in Florida and other States, oranges, including tangerines, 90 lb. and grapefruit 80 lb. California lemons, 79 lb., Florida limes, 80 lb. For weight of boxes prior to 1942, see p. 5, footnote 19.

⁶In California and Arizona, navel and miscellaneous.

⁷Production includes the following excessive quantities not utilized on account of economic conditions: (1,000 boxes) Texas, 500, Arizona, 923 (480 unharvested and 443 dumped).

¹Includes the following quantities unharvested on account of economic conditions (1,000 tons) California, 1930-433 including 316 sold but left on the vines, 1931-10, 1932-154, 1933-3 Other States, 1937-9, 1940-2 Price and value apply only to the harvested portion of the crop plus a quantity of fruit that was sold but left on the vines in 1930

²Equivalent returns per ton for bulk fruit at the first delivery point

³Total exports (domestic plus foreign) minus total imports Beginning 1933, domestic exports minus imports for consumption

⁴Included in total production of grapes, fresh basis, 1 ton of raisins equivalent to about 4 tons of fresh grapes

⁵Exports and imports of raisins converted to sweatbox, or production, basis at the ratio of 1 to 108

⁶Beginning 1933, imports for consumption.

⁷January-June 1941, first date reported

⁸The production estimate for California includes 12 000 tons (fresh weight) of raisin varieties lost on the drying trays because of rain damage

⁹Less than 1/2 ton

¹For some States in certain years, production includes some quantities unharvested on account of economic conditions. In 1945 the production estimate for California includes 12,000 tons (fresh weight) of raisin varieties lost on the drying trays because of rain damage

²Preliminary.

³Production less than 100 tons

⁴Equivalent returns per ton for bulk fruit at the first delivery point.

⁵Dried basis 1 ton of raisins equivalent to about 4 tons of fresh grapes

Bureau of Agricultural Economics.

¹Season begins about July 1 and ends in December

²Baltimore, Boston, Chicago, Cincinnati, Cleveland, Detroit, Minneapolis, St. Paul, New York, Philadelphia, Pittsburgh, and St. Louis, except for 1943 when Detroit and Cleveland market news offices were closed. Auction sales at Jersey City are included with New York.

³Table stock mostly in packages containing about 28 pounds; juicestock in packages containing mostly 25 to 40 pounds, with some special packs ranging from 42 to 50 pounds

Most of Thompson Seedless crop and all of Muscat crop in 1943 and most of both crops in 1944 and 1945 were restricted to raisin use, causing greatly reduced quantities of these varieties on fresh market.

⁴All California grapes sold at auction, including some varieties not shown in this table.

Production and Marketing Administration.

1946 ⁵	46,000	352 00	16,192	20,000	18,000	7,700				

¹According to the 1940 census there is also some commercial production of olives in Arizona but 99.8 percent of the 1939 production was in California.

²Includes the following quantities unharvested on account of economic conditions (tons) 1932-5,000, 1938-1,500. Price and value apply only to the harvested portion of the crop.

³Includes the olives used for California Spanish Green, Greek style, Sicilian style, chopped, minced, brine, and other cures. ⁴Less than 500 pounds. ⁵Preliminary.

Bureau of Agricultural Economics Imports compiled from reports of Department of Commerce. About 40 gallons of oil are obtained from 1 ton of olives in California. A gallon of olive oil weighs approximately 7.5 pounds.

¹Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, and official records of the Department of Commerce.

²Net processed weight. ³Dried peaches are 21 percent of total dried fruit for salad.

⁴Exports of dried fruit converted to unprocessed dry weight by dividing by 1.07. Unprocessed dry weight converted to terms of fresh fruit on the basis that 1 pound dried equals 6.5 pounds fresh from 1929 to date, conversion ratios of .5% and 6 pounds prevailed in earlier years. Canned peaches converted to terms of fresh on basis that 1 pound canned equals about 1 pound fresh. 48 pounds of fresh equal 1 bushel.

⁵January to June, not separately reported prior to this time. ⁶Less than 500 pounds. ⁷Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns of harvested production.

¹For some States in certain years, production includes some quantities unharvested on account of economic conditions. In 1945 and 1946, estimates of such quantities were as follows (1,000 bushels): 1945-Michigan, 40, Idaho, 6, Utah, 87, California clingstone, 1,083, 1946-New York, 84, California clingstone, 42. Prices apply only to the harvested portion of the crop.

²Preliminary.

³Includes 250,000 bushels harvested but not utilized owing to abnormal cullage.

⁴Mainly for canning.

Bureau of Agricultural Economics.

¹Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, 1929-43 and official records of the U S Department of Commerce

²Net processed weight

³Dried pears are 16 2/3 percent of total dried fruit for salad

⁴Canned pears converted to terms of fresh on the basis that 1 pound canned equals about 1 2 pounds fresh, dried pears converted to terms of fresh on the basis that 1 pound dried equals about 5 5 pounds fresh, 50 pounds fresh equals 1 bushel, except in California, where 48 pounds equals 1 bushel

⁵January- June 1930, not separately reported prior to this date.

⁶Prior to June 18, 1930, included with peaches, green, ripe or in brine

⁷Less than 500 pounds

⁸Preliminary

Bureau of Agricultural Economics Italic figures are census returns of harvested production.

¹For some States in certain years, production includes some quantities unharvested on account of economic conditions. In 1945, estimates of such quantities were as follows (1,000 bushels): Washington Bartlett, 400, Oregon Bartlett, 40, California Bartlett, 333. Prices apply only to the harvested portion of the crop.

²Preliminary.

³Production less than 1,000 bushels.

⁴Equivalent returns per bushel for bulk fruit at the first delivery point.

Bureau of Agricultural Economics.

¹For some States in certain years, production includes some quantities unharvested on account of economic conditions. In 1944, 1945, and 1946, estimates of such quantities were as follows (tons): 1944 - Plums, California, 2,000, Prunes, western Oregon, 3,300, 1945 - Plums, California, 1,000, Prunes, western Oregon, 9,700, 1946 - Prunes, western Oregon, 4,200. These quantities are not included in utilization figures. Prices apply only to the harvested portion of the crop.

²Preliminary³Includes 2,000 tons harvested but not utilized due to abnormal cullage.⁴The California prune crop (fresh basis) is derived by multiplying the estimate of dried prunes by 2½

¹Idaho, Washington, Oregon, and California²Net processed weight³Prunes in salad estimated at 43 percent of total dried fruit for salad⁴Exports of dried prunes converted to unprocessed dry weight by dividing by 1.025

Unprocessed dry weight converted to terms of fresh fruit on the basis that 1 pound

dried equals 2½ pounds fresh

Canned prunes converted to terms of fresh fruit on the basis that 1 pound canned equals 0.729 pound fresh

Otherwise prepared or preserved converted to terms of fresh fruit on the basis of 1 pound equals 0.899 pound fresh.

¹January to June, not segregated prior to this time²July to December 1937, 1938 not available³January to June 1939 1938 not available⁴Less than ¼ ton⁵Preliminary

¹The figures in this tabulation are for the commercial pack only and do not include quantities of fruit frozen by industrial users or other types of processors, who use all or the largest portion of their frozen pack as raw material for the manufacture of jams, jellies, and other fruit spreads, ice cream, bakery goods or alcoholic beverages. The tabulation also does not include custom freezing for industrial users nor quantities produced in frozen-food locker plants

²Maine, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania

³Missouri, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, and Texas

⁴Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, and Nebraska.

⁵Montana, Idaho, Colorado, Arizona, Utah, Washington, Oregon, and California

⁶Includes some quantities packed in the Midwest

⁷Bananas, cantaloups, citrus fruit, coconuts, cranberries, dewberries, elderberries, feijoa, figs, fruit juices, grapes, guavas, huckleberries, melon balls, mixed fruits, nectarines, oranges, orange puree, pears, persimmons, pineapples, plums, quinces, sweet cherries, and tangerines

¹ Fresh fruits, canned juices, and frozen fruits are on a calendar-year basis. Canned and dried fruits are on a pack-year basis. In the years 1941-46 fresh citrus fruits are on an across-year basis, beginning in November of the preceding year.

² Excludes noncommercial apples beginning with 1934.

³ Apricots, avocados, bananas, cherries (including an estimate for noncommercial), cranberries, figs, grapes, peaches, pears, pineapples, plums and prunes (including an estimate for noncommercial), and strawberries (including an estimate for noncommercial).

⁴ Apples, applesauce, apricots, berries, cherries (including brined), cranberries, figs, fruit cocktail and salad, grapefruit segments, olives (including brined), pineapple, plums, prunes, peaches, and pears.

⁵ Grapefruit, orange, blended citrus, and lemon juices (single-strength basis 1941-45), 1930-45, concentrated juices converted to single-strength basis 1941-45), pineapple, apple, grape, and prune juices and fruit nectars.

⁶ Dried packs of apples, apricots, Zante currants, dates, figs, peaches, pears, prunes, and raisins except for unmarketable figs and substandard prunes are in terms of processed dried weight.

⁷ Principally cherries, apples, peaches, apricots, strawberries, and other berries.

⁸ The per capita civilian consumption was obtained by dividing the total apparent civilian consumption by total population adjusted for underenumeration of children under 5 years of age, and for members of the armed forces not eating out of civilian food supplies.

Corresponding data on a calendar-year basis are as follows: 1943 - 1,667 and 12 9, 1944 - 1,206 and 9 3, 1945 - 1,913 and 14 7, 1946 - 2,877 and 20 7.

Bureau of Agricultural Economics

VEGETABLES AND MELONS

This section includes statistics on all crops commonly called commercial truck crops--for both fresh market and processing. The table on potato futures is new this year.

Commercial truck crops, which are harvested in some sections of the country every month of the year, are for the most part extremely perishable and must be marketed quickly to avoid waste. Production estimates are made at frequent intervals to be of most use in providing a basis for orderly marketing. Such estimates also indicate aggregate supplies, as well as quantities of each crop that will be available during a given period.

The seasonal groupings of truck crops for fresh market, adopted in 1943, correspond to the four seasons of the year. The name of each group, shown below, indicates the period when heaviest supplies of each crop are usually available, so that it is relatively easy to interpret the reports in terms of total production of all commercial truck crops for a given period.

Seasonal Groupings on Basis of the
Most Active Harvesting Period

WINTER	January, February, and	SUMMER	July, August, and
March		September	
SPRING	April, May, and June	FALL	October, November, and December

Subgroups for Most Crops

EARLY WINTER.	January and first half of February	EARLY SUMMER	July and first half of August
LATE WINTER	Second half of Feb- ruary and all of March	LATE SUMMER	Second half of August and all of September
EARLY SPRING	April and first half of May.	EARLY FALL	October and first half of November
LATE SPRING	Second half of May and all of June	LATE FALL	Second half of November and all of December

Subgroups for Short-Season Crops

EARLY SPRING.	April.	LATE SPRING	June.	MIDSUMMER	August
MIDSPRING.	May.	EARLY SUMMER	July.	LATE SUMMER	Sept.

The beginning and the ending of these seasons are not fixed dates but approximations, as there is necessarily some overlapping of the seasons outlined above.

The estimates of commercial truck crops for fresh market include only acreages of specified crops in important areas which are generally recognized as growing these crops in substantial quantities for shipment to market. They do not include farm gardens or strictly local market areas. The acreages for fresh market are those for harvest. Acreages partially harvested or not harvested because of low prices or other economic factors are included, but acreages lost or abandoned from natural causes are not included.

The estimates of truck crops for commercial processing include acreages grown under contract, acreages grown by processors, and equivalent acreages for tonnage procured through open-market purchases. Such equivalent acreages are not duplicated in the fresh market estimates. The estimates of truck crops for processing include quantities procured for commercial canning, freezing, and other processing, exclusive of dehydration. Quantities procured for dehydration are included in the estimates of truck crops for fresh market.

1946 ⁶	2,627	2,580	184 5	475,969	1 24	589,248	1 58

¹Includes the following quantities unharvested or not marketed on account of economic conditions (1,000 bushels) 1931-66, 1932-2,175, 1939-1,240, 1943-440, 1946-1,504 Price and value apply only to the harvested portion of the crop except in 1946 when the unharvested quantity was purchased by the Government under price-support program

²Prices of eastern potatoes, weighted by unloads, season September-May, from records of the Production and Marketing Administration

³Compiled from Monthly Summary of Foreign Commerce of the United States, January and June issues, and official records of the Department of Commerce

⁴The difference between total exports (domestic exports plus reexports) and total imports, beginning 1933 domestic exports minus imports for consumption — indicates net imports

⁵Beginning 1933 imports for consumption

⁶Preliminary.

1945.....	418,765	27,837	50,746	18,355	321,827	120,280
1946 ⁴	474,609	28,775	50,643	16,834	378,357	150,230

¹These production figures are unrevised and do not agree with similar data in other tables.
²Relates to quantities used on farms where produced. Additional quantities of purchased potatoes are so utilized

³Merchantable stocks consist of potatoes held by growers, local dealers, and buyers on farms or near areas of production in the 37 late and intermediate States for sale or delivery after Dec 31. They include potatoes held for sale or delivery to starch factories and other processors.

⁴Included under sales are potatoes grading U. S. No. 2 or better, utilized under the Government diversion program as follows: 1937--in Maine, 2,379,000 bushels diverted to starch factories, in other States, 6,372,000 bushels diverted to livestock feed; 1940--5,263,000 bushels diverted to livestock feed.

⁵Includes undetermined quantities diverted under Government programs to starch, dehydration, livestock feed, etc.

¹Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow, thus, the crop harvested in the Northern Hemisphere in 1946 is combined with the Southern Hemisphere harvest which began late in 1946 and ended early in 1947.

²Figures refer to harvested areas as far as possible.

³Preliminary.

⁴Estimated totals include allowance for missing data for countries shown, and for minor producing areas not listed.

⁵Estimates for 1944 to date include Southern Dobrudja and, therefore, are not strictly comparable with earlier years shown.

⁶Spain, 2 years, 1935 and 1939; Poland, 4 years, 1935-38.

⁷Excludes gardens and allotments from 1944 to date.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign-service officers, results of office research, and other information. Estimates for countries having changed boundaries have been adjusted to newer boundaries except as noted.

¹Figures for all commodities are on a calendar year basis, except onions which are for a 12-month period beginning in March.²Includes Casaba, Honey Ball, Honey Dew, Persian, and mixed melons. Cars of mixed melons may include cantaloupes as well as other muskmelons.³No record prior to 1939.

Production and Marketing Administration. Compiled from daily and monthly reports received from officials and local agents of common carriers throughout the country. Shipments shown in carlots include boat shipments reduced to a carlot basis. Shipments by truck are not included but have become increasingly important during this period. The data are not indicative of total production or total sales.

¹ Preliminary² Includes production of commercial truck crops for fresh market shipment and rough approximations of production in farm and market gardens but not in town and city gardens.³ Asparagus, lima beans, snap beans, cabbage, carrots, kale, lettuce and escarole, green peas, green peppers, and spinach.⁴ Artichokes, beets, cauliflower, celery, sweet corn, cucumbers, eggplant, onions, shallots, and other miscellaneous vegetables.⁵ The per capita civilian consumption obtained by dividing the total apparent civilian consumption by total population adjusted for underenumeration of children under 5 years of age and for members of the armed forces not eating out of civilian supplies.

Bureau of Agricultural Economics The figures in this table are given in terms of production weight, i.e., quantities available for consumption at the farm level. Normal marketing losses between the time of harvest and time of sale in the retail store--including shrinkage and spoilage in transit and storage, and spoilage in retail stores--are estimated roughly as follows: Tomatoes, 25 percent; leafy, green, and yellow vegetables, 14 percent; melons 13 percent; other truck crops 14 percent; potatoes 7 percent; sweetpotatoes, 20 percent prior to 1942, and 14 percent from 1942 to date. Data for 1909-28 in Agricultural Statistics 1944 table 307.

¹Total crop for processing converted to a canned basis by applying the following factors (cases of 24 No. 2 cans per ton farm weight) Cucumbers for pickles, 68 cases, cabbage for kraut, 54 cases, and pimientos, 29 cases.

²Equivalent cases of 24 No. 2 cans.

³Preliminary

Bureau of Agricultural Economics Compiled mainly from reports of the National Canners Association. Data for pickles, sauerkraut, and (beginning 1941) pimientos computed by B. A. E. In addition to the vegetables shown in this table, considerable quantities of the following products also are canned: Baked beans, carrots and peas, corn on the cob, hominy, kidney beans, mixed vegetables, mushrooms, okra, other greens than spinach, potatoes, rhubarb, sauerkraut juice, soups, spaghetti, succotash, sweetpotatoes, tomato paste, tomato sauce, tomato catsup, and vegetable puree.

¹Asparagus, lima beans, beets, carrots, hominy (through 1940), Irish potatoes, pickles (including bulk stock), pimientos, pumpkin and squash, sauerkraut (including bulk stock), spinach, succotash, sweet potatoes, tomato juice, pulp, catsup, paste, sauce, and chili; sauce, other greens, and mixed vegetables. Excludes baked beans, soups, baby foods, hominy (beginning 1941), and other minor vegetables.

²The per capita civilian consumption was obtained by dividing the total apparent civilian consumption by the total population adjusted for underenumeration of children under 5 years of age and for members of the armed forces not eating out of civilian supplies.

³Preliminary

1937 .	460,065	49,052	1942	479,249	31,694
1938 .	455,040	48,865	1943	555,042	29,737
1939 .	468,293	47,256	1944	606,713	30,296
1940	498,731	39,131	1945	697,271	35,648
1941	506,273	38,466	1946	758,788	46,506

¹All of the shipping-point inspections were made under cooperative agreements between the Federal and State governments. Receiving-market inspections were under the Federal Service. Some of the shipments inspected at receiving markets had been inspected previously at shipping points.

Shipping-point inspections were mostly for grade, as defined in the Federal standards. A considerable part of the receiving-market inspections was for condition only. Inspections were requested and paid by the shippers and other financially interested parties and were optional with the applicants except when required by State laws or marketing agreements. In addition to the quantities shown, there were inspections of products for canning factories, institutions, steamship lines, and Government agencies, amounting to 172,340 cars in 1945.

The figures, particularly in recent years, include some motortruck or less-than-carlot shipment inspections, which have been converted to a carlot basis. For the year beginning July 1946, shipping-point inspections were made in all 48 States and Hawaii and receiving-market inspections in 58 cities.

¹The reported truck receipts here shown for 1946 are estimated to represent approximately the following percentages of the total 1946 truck receipts in these cities: Atlanta and San Francisco, 95 percent; Los Angeles and Kansas City, 90 percent; Boston, Chicago and Philadelphia, 85 percent; New York, 75 percent.

²Includes Casabas, Honey Balls, Honey Dews, Persian melons, and mixed melons of these classes.

¹ Figures are for crop years. Generally the main coffee-harvesting period begins in the fall months of the year shown and extends into the early months of the following year, except in certain Southern Hemisphere countries such as Brazil, Madagascar, and the Netherlands Indies, where the main harvest begins in May or June of the year shown.

² Exports for 1931-35 used for all countries except Brazil and Colombia. ³ Exports used in cases where other data are not obtainable. ⁴ Preliminary. ⁵ Bags of 132.276 pounds (60 kilograms).

⁶ No data available. ⁷ Exports.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research, and other information.

¹ Preliminary² Year beginning April 1³ Includes tea dust and siftings⁴ No data available⁵ Exports from Formosa (Taiwan) are included, since Formosa reverted to China in accordance with the terms of the Potsdam Agreement⁶ Does not include exports to Japan⁷ January-September only.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research, and other information

STATISTICS OF HAY, SEEDS, AND MINOR FIELD CROPS

A change in the method of estimating prairie or wild hay causes a break in the continuity of some of the hay series. Beginning in 1939, wild hay is estimated for only 22 Western States. In the remaining 26 States, wild hay is now included in "other hay," along with the kinds formerly grouped as "miscellaneous tame hay." Therefore, the group "all tame hay" can no longer be segregated in the table entitled "Hay, by kinds." Acreage and production, United States, 1929-46, " as has been done in the past. And under both acreage harvested and production, the estimates from 1939 to date in the columns headed "Other hay" and "Wild Hay" are not quite comparable with estimates for previous years.

Long-time averages have been added to the historical table of pasture and range condition to assist in evaluating current reported condition.

The table on "Usual rate of seeding specified crops, by States," shows minor changes in the national rates, due to weighting by current planted acreages, and substitution of more recent rates of planting for soybeans, cowpeas, and potatoes.

¹Season average prices obtained by weighting United States monthly prices by monthly marketings of all hay. Data for earlier years for all hay, alfalfa, clover and timothy, and prairie hay in January 1946 issue of Crops and Markets, p. 55.

²Compiled from reports made directly to the Production and Marketing Administration by its representatives in the market. Straight average of 12 months beginning in July at Kansas City and April at Los Angeles. Data for earlier years on Kansas City market in 1928 Yearbook, table 292, and 1931 Yearbook, table 327.

¹Table includes, besides the ordinary edible beans and beans grown for seed, blackeyes and garbanzos in California. Soybeans and mung beans are not included. Mung beans were produced in Oklahoma as follows (1,000 lb.) 1942-5,400, 1943-6,300, 1944-11,000, 1945-24,200, 1946-14,700

²Price of cleaned beans

³Farm value of dry edible beans equals the price of cleaned beans applied to the production of cleaned beans rather than total production

⁴Compiled from New York Producers' Price Current Average of daily quotations

⁵Imports and exports compiled from Monthly Summary of Foreign Commerce of the United States and official records of the Department of Commerce

⁶Bags of 100 pounds.

⁷Acreage grown alone

⁸Imports for consumption, beginning 1933

⁹Including Government holdings

¹⁰Preliminary

Bureau of Agricultural Economics Italic figures are census returns, census figures include all States; other figures, principal producing States only.

¹Excluding soybeans, mung, adzuki, broad or horse beans, and similar classes not commonly used as edible beans in the United States. Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow, thus, the crop harvested in the Northern Hemisphere in 1946 is combined with the Southern Hemisphere harvest which began late in 1945 and ended early in 1947.

²Preliminary.

³Austria, Czechoslovakia, Germany, Poland, Japan, and Angola, 4 years; Spain and Madagascar, 2 years; Korea, 1 year; Argentina, 3 years.

⁴Includes data for Southern Dobruja for 1941 to date, the figures, therefore, are not strictly comparable with earlier years shown.

⁵Includes estimates for countries for which data are not shown for individual years.

⁶Production in Hokkaido Province, where most of the dry edible bean varieties are grown.

⁷Includes lima, kidney, and dolichos dry edible beans.

⁸Some used for stock feeding.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research and other information. Estimates for countries having changed boundaries have been adjusted to prewar boundaries except as noted.

¹Data include all dry edible and seed peas but do not include cowpeas nor Austrian winter peas. Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow, thus, the crop harvested in the Northern Hemisphere in 1946 is combined with the Southern Hemisphere harvest which began late in 1946 and ended early in 1947.

²Preliminary. ³Bags of 100 pounds.

⁴Data for 1944 to date include some for canning and feed in Ontario Province and some for canning and garden pea seed in Alberta Province.

⁵Austria, Czechoslovakia, Germany, Hungary, and Poland 4 years, Spain 2 years (1935 and 1939); United Kingdom 1 year (1939). China 7 years (1931-37).

⁶Estimates for 1944 to date include Southern Dobrudja and, therefore, are not strictly comparable with earlier years shown.

⁷Estimates proportioned from data for all dry legumes.

⁸Includes estimates for countries for which data are not shown for individual years.

⁹Estimates for 22 provinces.

¹⁰Not separately classified prior to 1940, estimates for earlier years were based on the quantity exported.

¹¹Compiled from data for the States of South Australia, Tasmania, and Victoria, where practically all of the crop is produced.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research, and other information. Estimates for countries having changed boundaries have been adjusted to prewar boundaries except as noted.

TABLE 393.--Peas, dry, field Production and Sept. 1 stocks, by classes, in 100-pound bags, United States, 1943-46¹

¹Includes the following quantities not available for marketing because of economic conditions and the marketing agreement allotments (1,000 pounds) 1935, 5,436; 1937, 4,365; 1938, 3,140; 1939, 2,813. Price and value apply only to the part of the crop which was sold.

²Prior to 1932 prices are as of Dec. 1.

³Compiled from Monthly Summary of Foreign Commerce of the United States, and official records of the Department of Commerce.

⁴Total exports (domestic plus foreign) minus total imports, beginning 1933 domestic exports minus imports for consumption.

⁵1929 to 1931 represent hops used to make cereal beverages containing less than 0.5 percent of alcohol by volume, 1932 includes 867,057 pounds of hops used to make cereal beverages containing less than 0.5 percent of alcohol by volume and 6,900,263 pounds fermented malt liquor containing not more than 3.2 percent of alcohol by weight, 1933 to date, used for fermented liquor. Annual reports of the Commissioner of Prohibition, 1929, Commissioner of Industrial Alcohol, 1930 to 1932, and records of the Bureau of Internal Revenue, 1933 to date.

⁶Includes hop extract and lupulin 1930-35. ⁷Net imports. ⁸Beginning 1933 imports for consumption.

⁹Hops, only, beginning January 1936.

¹⁰Prior to 1937, the Sept. 1 stocks included only those in growers' hands, from 1937 to date, stocks in dealers' hands and in brewers' hands are also included and these have greatly exceeded the growers' stocks. On Sept. 1, 1943-46, no stocks were reported in hands of growers.

STATISTICS OF BEEF CATTLE, HOGS, SHEEP, HORSES, AND MULES

This chapter contains statistics of most kinds of farm livestock and of livestock products except dairy and poultry. A summary by geographic divisions of the number of cattle and calves on feed for the years since 1930 is new this year. Also new is the table on Commodity Credit Corporation purchases, sales, and stocks of wool.

Revised estimates of numbers of livestock on farms and ranches January 1 and of production and income are shown in this issue. Revisions of inventory numbers cover the years 1940-45. For production and income, revisions are for 1939 to 1944. However, the estimates of numbers of sheep on farms and ranches and wool production for Utah, and consequently the United States, were revised back to 1936. The production and income estimates for sheep and lambs were revised back to 1930.

Inventory numbers in years when the Census relates to a different date than January 1 were adjusted to a January 1 equivalent number. This adjustment takes into account the disappearance of numbers that were on hand January 1, which occurred between that date and the date of the enumeration.

The estimates of inventory numbers for January 1, 1945, generally differ from the census figures for the same date. The 1945 census was taken under trying wartime circumstances, and in some States the enumeration was delayed over a considerable period of time. The delay meant that inventory numbers for various farms were reported under widely varying conditions and did not always represent the actual January 1 inventory. Therefore, the estimates for inventory numbers for January 1, 1945, were not revised to agree with the census reported number. The census enumeration, however, pointed to the need for revising downward the number of horses, mules, and sheep, and for revising upward the estimates of cattle. The estimates for hogs were changed only slightly.

¹Obtained by subtracting the estimates of milk cows and heifers 2 years old and over on farms, shown in table 412, from the estimates of all cattle on farms, shown in this table.

²Calves born during year.

³Italic figures are from the census. Census dates were Apr. 1, 1930; Jan. 1, 1935; Apr. 1, 1940; and Jan. 1, 1945. 1930 and 1940 exclude spring-born calves.

⁴Preliminary.

¹End of year estimates (October to December) included under following year for comparisons and totals. Thus for Canada the Dec. 1, 1940, estimate of 8,316,000 is shown under 1941.

²Preliminary

³Average for 2 to 4 years only

⁴Census or estimate for single year.

⁵Estimates for 1940-46 revised on basis of the 1945 Census of Agriculture

⁶Data include buffaloes

⁷March

⁸Census, Dec. 31, 1934

⁹Includes Southern Dobrudja

¹⁰September

¹¹Data not on a comparable basis with prewar figures.

¹²Data include only number taxed

¹³Includes China proper (22 provinces), Manchuria, Jehol, and Sinkiang (Turkistan)

¹⁴Census, Jan. 1, 1939

¹⁵Includes estimates for Outer Mongolia ¹⁶June

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign Governments, reports of United States foreign service officers, results of office research, and other information. Estimates for countries having changed boundaries have been adjusted to prewar boundaries except as noted.

¹These payments were authorized by the War Food Administration in an effort to maintain and increase the production of beef. They were made through the Commodity Credit Corporation, with county AA committees (under supervision of the State committees) responsible for the administration of the program, and were made for the period beginning May 19, 1945, and ending June 30, 1946.

²Revised.

Production and Marketing Administration.

¹ Estimates include only cattle being fattened for market as a more or less distinct agricultural enterprise, and exclude small operations incidental to dairy and general farming. Cattle thus fed are presumed to produce carcasses that will grade Commercial or better. In addition there have been a number of cattle finished on distillery slop, mostly in Kentucky, and on byproduct feeds in other States not shown, as well as large numbers being winter-fed in West Virginia, Virginia, Kentucky, and some other States, to be marketed as "grass fat" cattle in the late summer.

² Includes cattle and calves on feed in Pennsylvania and in 13 Western States.

¹Data in this report are obtained from offices of State veterinarians. Under "Public stockyards" are included stockers and feeders which were bought at stockyards markets. Under "Direct" are included stockers and feeders coming from other States from points other than public stockyards, some of which are inspected at public stockyards while stopping for feed, water, and rest en route.

¹End of year estimates (October to December) included under following year for comparisons and totals. Thus for Canada, the December 1940 estimate of 6,117,000 is shown under 1941. ^{1a}Preliminary. ²Average for 2 to 4 years only. ³Census or estimate for single year. ⁴March. ⁵Data not on a comparable basis with prewar figures. ⁶Census, Dec 31, 1934. ⁷Includes Southern Dobrudja. ⁸September. ⁹Includes China proper (22 provinces), Manchuria, Jehol, and Sinkiang (Turkistan). ¹⁰Census 1940. ¹¹Census, Jan 1, 1939. ¹²1934. ¹³Data include only number taxed.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research, and other information. Estimates for countries having changed boundaries have been adjusted to prewar boundaries except as noted.

¹Excludes interfarm sales.

²Includes hogs shipped in from other States and from central markets but excludes intrastate shipments.

³Adjustments were made for hogs shipped in and changes in inventory.

⁴No adjustments made for cost of hogs shipped in and changes in inventory values. Gross income is "Cash income from sales of hogs, pork, and lard" plus "Value of hogs slaughtered for home consumption."

⁵Includes Government purchases.

⁶Preliminary.

¹Less than 500 pounds.²Revised.³Includes production in war-duration or "Fulmer" plants.

Includes U. S. Department of Agriculture shipments to United States Territories.

⁴Adjusted for changes in stocks held outside reported positions by U.S. Department of Agriculture, and in 1944-46 for lard procured by the Army for relief abroad.⁵Preliminary.

Bureau of Agricultural Economics. Compiled as follows: Production, 1931-46, and stocks, 1931-40, from U.S. Department of Agriculture. Stocks, 1941-46, Bureau of the Census. Trade figures, from Foreign Commerce and Navigation of the United States, and records of the Bureau of the Census. Use in shortening, margarine, and nonfood products, Bureau of the Census. Disappearance computed from data on production, trade, and stocks. Per capita disappearance based on use as lard and July 1 population, including military personnel. Totals and per capita estimates computed from unrounded numbers.

¹These payments were authorized by U. S. Department of Agriculture in an effort to maintain and increase the production of lamb and mutton. There were made through the Commodity Credit Corporation with county AAA committees (under supervision of the State committees) responsible for the administration of the program, and were made for the period beginning Aug. 5, 1945, and ending June 30, 1946.

²Revised.

Production and Marketing Administration.

¹Data in this report are obtained from offices of State veterinarians. Under "Public stockyards" are included stockers and feeders which were bought at stockyards markets. Under "Direct" are included stockers and feeders coming from other States from points other than public stockyards, some of which are inspected at public stockyards while stopping for feed, water, and rest en route.

¹As reported by Bureau of the Census. Includes wool stored in bonded warehouses prior to payment of duty. Excludes wool on farms for all years, and wool stored for the British Government for re-export, 1942-46.

²Includes hair of the angora goat, alpaca, and other like animals.

³General imports less re-exports, 1930-33, inclusive. Apparel wool for all years includes the item "not finer than 40's" both free and dutiable. Carpet wool includes only Donskoi, Smyrna, East Indian, Chinese, and similar wool without merino or English blood.

⁴Production, minus exports, plus imports; stocks not taken into consideration for the years 1930-35 the item "not finer than 40's" has been deducted from carpet wool totals reported by the Department of Commerce and added to apparel wool, thus making entire series comparable.

⁵Does not include 222,222 220 pounds in 1942, 275 476,308 pounds in 1943, 2,725,929 pounds in 1944, 5,372,698 pounds in 1945, and 14,840 pounds in 1946, imported free of duty as an act of international courtesy. Wool so imported consisted almost entirely of wool stored in this country for the British Government, and later re-exported. This wool was not available to domestic mills.

⁶Preliminary.

Bureau of Agricultural Economics. Imports and exports from Foreign Commerce. Data for 1909-29 in Agricultural Statistics, 1942, table 556.

1946-47	287,972	27,773	333,822	126,337	10,488	144,037	160,204	17,932	189,670
Total	1,195,741	121,821	1,398,448	760,357	108,393	947,389	387,162	33,896	445,198

¹The program year for 1943-44 extended from Apr. 23, 1943, to Mar. 31, 1944, for shorn wool and to Apr. 30, 1944, for pulled wool; the program year for 1944-45 extended from the termination of the previous program to Dec. 31, 1944; the program year for 1945-46 extended from Jan. 1, 1945, to Mar. 31, 1946, and the program year for 1946-47 extended from Apr. 1, 1946, to Apr. 15, 1947.

²The conversion factor used for scoured shorn wool, is 2.3, for scoured pulled wool, 1.5. As the wool is reweighed at the time of sale, purchases do not equate to sales plus stocks.

Bureau of Agricultural Economics. This tabulation is based on monthly handlers' reports to the Livestock Branch, Production and Marketing Administration, and on data of the Commodity Credit Corporation.

FOOTNOTES FOR TABLE 463

¹Wool produced mostly in the spring in the Northern Hemisphere is combined with that produced in the season beginning July 1 or October 1 of the same year in the Southern Hemisphere. Pulled wool is included for most countries at its greasy equivalent.

²Preliminary.

³Includes estimates for Mexico, Newfoundland, Netherlands West Indies, Guatemala, and Salvador.

⁴Includes Southern Dobrudja.

⁵Data for years 1939 through 1946 not on a comparable basis with prewar figures.

⁶Includes estimates for countries producing 2 million pounds or less, namely Austria, Belgium, Czechoslovakia, Denmark, Iceland, Sweden, and Switzerland.

⁷Includes China Proper (22 provinces), Manchuria, Jehol, and Sinkiang (Turkestan).

⁸Includes estimates for Cyprus, Palestine, Trans-Jordan, and Outer Mongolia.

⁹Estimates of the Buenos Aires Branch, First National Bank of Boston. Earlier years adjusted on the basis of actual exports.

¹⁰Estimates based largely on production in Rio Grande do Sul, which produces about 80 percent of the total.

¹¹Based on recent surveys of the Junta Nacional de la Industria Lanera.

¹²Estimates of the Camara Mercantil de Productos del Pais (Mercantile Exchange of Uruguay).

¹³Includes relatively small production in Bolivia, Colombia, Ecuador, Falkland Islands, Paraguay, and Venezuela.

¹⁴Union of South Africa, Union Protectorates, and South-West Africa.

¹⁵Includes estimates for Kenya, French West Africa and Togo, and Libya.

¹⁶Rounded to tens of millions.

Office of Foreign Agricultural Relations. Prepared or estimated on the basis of official statistics of foreign governments, reports of United States foreign service officers, results of office research, and other information. Estimates for countries having changed boundaries have been adjusted to prewar boundaries except as noted.

358 BEEF CATTLE, HOGS, SHEEP, HORSES, AND MULES, 1947

¹Total mill consumption of greasy and scoured shorn wool converted to a greasy shorn equivalent and total consumption of greasy and scoured pulled wool converted to a greasy pulled equivalent

²Prior to 1942 includes a small amount of duty-free foreign wool and excludes a small amount of duty-paid foreign wool

³Prior to 1942 includes Donskoi, Smyrna, East Indian, Chinese and similar wools, particularly suitable for floor coverings, and excludes all other wool, whether duty-free or dutiable

⁴Total consumption of greasy and scoured wool (both shorn and pulled) converted to a scoured basis

⁵Revised

⁶52-week totals computed from weekly averages for reporting year, which covered 51 weeks in 1942 and 53 weeks in 1943

⁷Preliminary

Bureau of Agricultural Economics Compiled from wool consumption reports of the Bureau of the Census. Data by class and origin for 1937 have been revised on the basis of census revised totals

Grade 56's.	52	37	(+)							

¹Wools grown under range conditions Territory wools show a wide variation in shrinkage and color

²Wools that are bright in color and of relatively light shrinkage Nearly all the wools grown in the States east of the Mississippi River are of this type Bright wools are also grown in parts of Minnesota, Iowa, and Missouri Wools from Kentucky, Virginia, and Tennessee usually bring prices from 1 to 3 cents per pound, grease basis, above other bright fleeces, because of their lighter shrinkage Prior to 1938, the "Bright Fleece" wools were designated as "Ohio and Pennsylvania" wools

³London wool auctions were suspended at outbreak of war Supplies and prices under Government control No quotations after July 1939 Production and Marketing Administration

¹Dressed carcass weight of cattle, calves, sheep, and lambs, pork excluding lard is carcass weight of hogs minus an allowance for trimmable fat rendered for lard and rendered pork fat.

²Includes lard entering into manufactured products.

³1934 includes 1,380 million pounds of beef, 174 million pounds of veal, 21 million pounds of lamb and mutton, and 127 million pounds of pork, and 1935 includes 57 million pounds of beef and 5 million pounds of veal, from animals slaughtered under the emergency Government relief purchase and hog reduction programs.

⁴The total apparent civilian consumption for the years 1941-46 was obtained by subtracting ending stocks, lend-lease, other exports, and military takings from the total supply. The per capita civilian consumption for each year was obtained by dividing the total apparent civilian consumption by the total population adjusted for under-enumeration of children under 5 years of age, less military personnel eating from military supplies.

⁵Preliminary.

¹ In order to show the total change in all livestock numbers as a single group, as related to the feeds used by the various species, different animal units have been devised and the estimated numbers on farms Jan 1 have been converted to these units, which are intended to allow for differences in size and feed requirements of the several species.

The weighting used in computing the animal units shown in this table has been varied somewhat over the entire period in order to make allowance for changes in feeding and marketing practices.

In recent years the weighting per animal has been as follows:

(A) Representing feed-grain-consuming animals, excluding chickens. Horses and mules 1.14, milk cows 1.00, other cattle 0.51, sheep 0.04, hogs 0.87.

(B) Representing hay-forage and pasture-consuming animals. Horses and mules 1.00, milk cows 1.00, other cattle 0.75, sheep 0.12.

(C) Jan 1 combination, based largely on relative weights.

(D) Total feed-grain consuming animals, including chickens, or chickens added to (A).

CHAPTER VII

DAIRY AND POULTRY STATISTICS

Statistics on numbers of milk cows include two separate series. The January 1 inventory number is the total of cows and heifers kept for milk of the specific age classification "2 years old and older." The other series, an annual average number of milk cows milked during the year, is the basis for milk production estimates. The number of cows and heifers in the former series is somewhat larger than in the latter, because it includes heifers over 2 years of age which have not yet freshened.

Prices of milk and butterfat include returns to farmers from some but not all of the wartime Government subsidy programs. Included in the prices here are Government fluid-milk payments, those under the butter roll-back subsidy program and the cheddar cheese purchase and sales program, which were made to dealers and processors and passed back to farmers through normal price channels. On the contrary, the Government dairy production payments direct to farmers are not included in the price series because they were not part of the normal marketing procedure. In comparing the several series of milk prices, it is also important to note that prices received by farmers for whole milk at wholesale are for milk of the butterfat content actually sold (about 3.91 percent), whereas prices of milk purchased by condenseries and by market milk distributors are on a 3.5 percent butterfat basis.

¹Modified accredited counties are those in which tuberculosis does not exist among more than 0.5 percent of the cattle, as determined by official tuberculin testing, and from which all reactors to the test have been removed. Includes all areas in Puerto Rico and the Virgin Islands.

²In 1946, two counties in South Dakota were joined into one.

Bureau of Animal Industry

Current data on tuberculosis-eradication work, including progress by States and counties, may be obtained from Bureau of Animal Industry. Data for 1917-25 in 1925 Yearbook, table 519, and data for 1926-35 in Agricultural Statistics, 1936, table 366, and data for 1936 in Agricultural Statistics, 1946, table 484.

¹Estimates include milk delivered to creameries, condensaries, cheese factories, and market milk receiving stations, but exclude market milk sold to other farmers for local delivery

²Approximations based chiefly on the population in small towns and rural areas, where most families purchase their milk supply directly from local farmers

¹"Standard" refers to the grade of milk commonly sold in each market. Grades may vary from market to market because of variation of the factors which enter into grade determination.

Bureau of Agricultural Economics. Compiled from reports secured through the cooperation of milk distributors, producers' associations, and municipal officers.

FOOTNOTES FOR TABLE 506

¹These payments were authorized by the War Food Administration in an effort to maintain and increase the production of dairy products. They were made through Commodity Credit Corporation, with county AAA committees (under supervision of the State committee) responsible for the administration of the program, for the period beginning October 1943 and ending June 30, 1946. A payment was made after the close of each production period for eligible dairy products produced and sold during such period. Beginning on Jan. 1, 1945, the production periods were calendar quarters. Only one payment was made to an eligible producer for each production period.

²The data shown for 1945 represent the number of payments for the second quarter. Totals shown for 1943 and 1944 represent the sum of the payments for the peak period of each State.

³Revised.

¹Milk sold at wholesale and retail, plus milk skimmed for sale as cream and milk equivalent of farm butter sold

²Computed from the value of milk, cream, and farm butter sold, divided by the quantity of milk or, butterfat used in the preparation of these products for market.

³Milk utilized for household consumption valued in each State at average returns per 100 pounds for milk utilized in dairy products sold.

⁴Value of milk, cream and farm butter sold, plus the value of these products consumed in the household on farms where produced.

⁵Milk produced on farms valued in each State at average returns per 100 pounds for milk utilized in dairy products sold. In addition to gross income, it includes the value of whole milk fed to calves.

⁶Preliminary.

TABLE 517 --Dairy products Quantities manufactured, United States, 1938-15

⁷Total disappearance is based on production, imports for consumption, and change in stocks during the year. Production statistics for these commodities appear in other tables in this chapter. Statistics for consumption on fat solids basis. The production of total milk for human consumption differs from total farm production of milk in that the former excludes milk fed to calves but includes off-farm production, while the latter excludes off-farm production but includes milk fed to calves. Milk fed to calves and milk produced off farms are usually of approximately equal volume.

⁸Fluid milk equivalent.
⁹Canned weight. The evaporated milk is unskimmed, unsweetened, case goods. The condensed milk is unsweetened (plain condensed) unskimmed, bulk goods and sweetened condensed milk, unskimmed, case and bulk goods.

¹⁰The total apparent civilian consumption for the years 1941-46 was obtained by subtracting ending stocks, lend-lease shipments, other exports, and mili-

tary takings from the total supply. The per capita civilian consumption for each year was obtained by dividing the total apparent civilian consumption by the total population adjusted for underenumeration of children under 5 years of age, and for members of the armed forces not eating out of civilian food supplies.

¹¹Preliminary

¹²Includes both farm and factory-made butter

¹³Skim American

¹⁴Production of ice cream prior to 1937 is not strictly comparable with that of following years because of the inclusion of production of small retailers and counter freezers since 1937

¹⁵Data not available prior to 1935

Bureau of Agricultural Economics. Data for 1924-28 in Agricultural Statistics, 1944, table 459

Total.....	2,441,982	93,843	3,666,300	183,315

¹A payment of 3 3/4 cents per pound (with appropriate adjustments for moisture content) was made by the Commodity Credit Corporation through the Dairy Products Marketing Association, Inc., on cheddar cheese during the period Dec 1, 1942, to Jan 31, 1946, after which the program was terminated. Listed according to year of claim. No deduction made for subsequent recovery of payments in the case of sales to Government agencies.

²A payment of 5 cents per pound was made by the Reconstruction Finance Corporation to creameries for butter produced (in excess of 1,000 pounds in any month) June 1, 1943 to Oct 31, 1945, to offset a corresponding decrease in OPA ceiling prices. This program was terminated Nov 1, 1945, when the ceiling price of butter at creameries was increased by 5 cents per pound. Listed according to year of disbursement. Data from RFC records.

¹For U S Record of Performance and U S Register of Merit, the year covers 365 days from date of first egg of each bird. Most candidates begin laying in the late summer or early fall.

²Manufacturer's rating of the number of eggs the incubators will hold, including both incubating and hatching trays.

³Single-male matings of U S R O P, birds

⁴Computed by dividing the number of eggs laid during the year by the number of candidates, according to Record of Pedigreed Candidates submitted for U S Register of Merit Analysis

¹Does not include commercial broiler production.

²Total chicks hatched, less death loss of chicks and young chickens during the year.

³Death loss during the year of mature chickens on hand Jan. 1.

⁴Chickens raised, less death loss during the year of mature chickens on hand Jan. 1. Bureau of Agricultural Economics.

⁵Change in Jan. 1 inventory numbers during the year.

⁶Chickens consumed in households of farm producers.

⁷Value of sales, plus value of those consumed in households of producers.

¹By commercial broiler is meant young chickens of the heavy breeds, to be marketed at from 2 to 4 pounds live weight and from which no pullets are kept for egg production. These figures are not included in farm production of chickens.²Includes value of consumption in households of producers, which is less than 1 percent of total production.

Bureau of Agricultural Economics.

¹By commercial broiler is meant young chickens of the heavy breeds, to be marketed at from 2 to 4 pounds live weight and from which no pullets are kept for egg production. These figures are not included in farm production of chickens.

²Includes value of consumption in households of producers, which is less than 1 percent of total production.

Bureau of Agricultural Economics.

COMMERCIAL HATCHERIES

415

TABLE 546 --Chicks hatched by commercial hatcheries, average price of baby chicks, and value of chick production, by States, 1945 and 1946

Production and Marketing Administration. Covers service to poultry-canning plants and plants preparing eviscerated poultry for sale as such, under cooperative agreements between the Federal and State governments. Inspections are made for condition and wholesomeness and not for grade. The service is optional and is paid for by the applicants.

¹For U S Record of Performance and U S Register of Merit, the trap-nest period covers 8 consecutive weeks for each candidate during the winter or early spring. The National Turkey Improvement Plan became operative on Sept. 25, 1943.²Manufacturer's rating of the number of eggs the incubators will hold, including both incubating and hatching trays. In most instances the data are for turkey-egg capacity only, but in some cases the combined capacity for both chicken and turkey eggs is included.

*Total poult hatched, less death loss of poult and young turkeys during the year.

*Death loss during the year of breeder hens on hand Jan. 1.

*Turkeys raised, less death loss during the year of breeder hens on hand Jan. 1.

*Change in Jan. 1 inventory numbers during the year.

*Turkeys consumed in households of farm producers

*Value of sales, plus value of those consumed in households of producers.

Bureau of Agricultural Economics.

¹Number of eggs produced during the year, divided by number of hens and pullets on hand Jan. 1.
²Number of eggs produced during the year, divided by the average number of hens and pullets of laying age on hand during the year.
³Consumed in households of farm producers.
⁴Value of sales, plus value of those consumed in households of producers.
⁵Less than half a million

Production and Marketing Administration. Data for 1935 and 1936 in Agricultural Statistics, 1945, table 540

CHAPTER VIII

STATISTICS OF FOREIGN TRADE IN AGRICULTURAL PRODUCTS

The term "foreign trade" is applied to trade (exports and imports) between the United States, including noncontiguous Territories, and foreign countries. Trade between continental United States and noncontiguous Territories is referred to as "shipments." The Philippine Islands and, prior to Jan 1, 1935, the Virgin Islands are included with foreign countries. Alaska, Hawaii, Puerto Rico, and since Jan 1, 1935, the Virgin Islands are noncontiguous Territories. Beginning Jan 1, 1940, trade with foreign countries through the customs district of Virgin Islands is not included in United States trade statistics. Figures for shipments out of noncontiguous Territories include small quantities to other noncontiguous Territories. In statistics of foreign trade, forest products and distilled liquors are considered nonagricultural products, as distinguished from the strictly agricultural products.

Figures on exports include lend-lease and United Nations Relief and Rehabilitation Administration exports. They exclude shipments between continental United States and its Territories, shipments to the United States armed forces abroad, and shipments by and for the account of, or consigned to, United States Government agencies and establishments abroad.

¹General imports prior to July 1933, subsequently, imports for consumption.

²General imports prior to July 1933, excepting wool, where imports for consumption have been used in order to show the degree of competitiveness.

³Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States, together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 95 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and spices.

-Excess of imports.

¹Preliminary

Office of Foreign Agricultural Relations. Compiled from official records of Bureau of the Census and of the United States Tariff Commission. Data for 1910-28 in Agricultural Statistics, 1942, table 687.

Total complementary.....

¹Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States, together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 95 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and spices.

²Preliminary.

³Includes horses and mules for immediate slaughter and teams of immigrants. Not separately classified prior to July 1, 1941.

⁴Less than 500.

⁵Imports exclude wool imported free in bond for manufacture of carpets, rugs, etc.

⁶Excludes corn, barley, oats, and wheat (unfit for human consumption).

⁷Includes palm-kernel oil.

⁸Not separately classified prior to Jan. 1, 1943.

⁹Jan. 1-June 30.

¹⁰Imports exclude coffee imported into the customs district of Puerto Rico.

¹¹Excludes value of rubber salvaged from the high seas.

¹²Excludes exports of food for relief or charity by individuals or private agencies. The value of these exports for the period January-June 1942 was \$2,114,000. For the years beginning July 1, they are as follows: 1942, \$10,389,000; 1943, \$35,602,000; 1944, \$47,735,000; and 1945, \$24,047,000.

¹³Mar. 11, 1941-June 30, 1942.

¹⁴Sept. 1944-June 1945.

Office of Foreign Agricultural Relations. Compiled from official records of Bureau of the Census and the United States Tariff Commission. Data for 1938 and 1939 in Agricultural Statistics, 1942, table 688.

¹Based on data for 122 agricultural import classifications.

²Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States, together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 95 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and spices.

¹Includes fresh, pickled or cured, canned beef and veal, oleo oil and stock, oleic acid, oleo-margarine, tallow, and stearin from animal fats.

²Preliminary

³Includes fresh, pickled or salted, canned pork, hams and shoulders, bacon, sides, lard including neutral, and lard oil

⁴Includes barrels, baskets, and boxes (1 barrel=3 bushels, 1 basket or box=1 bushel)

⁵Includes apple waste (except pomace)

⁶Less than 500

⁷Conversion factors used Barley malt, 1 1 bushels=1 bushel barley prior to 1944, 1 bushel malt (34 pounds=1 bushel barley (48 pounds) 1944 to date, cornmeal, 1 barrel=4 bushels corn, oatmeal, 18 pounds=1 bushel of oats prior to 1943, 13 17 pounds of oatmeal=1 bushel of oats 1943 to date, paddy or rough rice, 162 pounds=105 3 pounds cleaned or milled (conversion factor revised retroactive to 1930), rice flour and meal, 1 pound=1 pound of cleaned or milled, rye flour, 1 barrel=6 bushels of rye, wheat flour, 1 barrel=4 7 bushels of wheat

⁸Includes malt

⁹Includes paddy or rough, beginning Jan 1, 1933

¹⁰Corn only, beginning Jan 1, 1933

¹¹Includes domestic flour and flour ground from imported wheat

¹²Includes crude and refined

¹³Refined only, prior to 1941, 1941 to date includes crude and refined

¹⁴January-June

¹⁵Sales of 500 pounds, gross

¹⁶Tons of 2 240 pounds

¹⁷Tons of 2,000 pounds

- ¹Corrected to Oct 4, 1946
²Less than 500
³The Latin American Republics include Costa Rica, Guatemala, Honduras, Nicaragua, Panama Republic, Canal Zone, El Salvador, Mexico, Cuba, Dominican Republic, Haiti, Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Venezuela
⁴Includes 340,000 pounds from New Zealand and 15,000 pounds from Argentina
⁵Imports from Argentina
⁶British West Indies include the Bahamas, Bermuda, Barbados, Jamaica, Trinidad and Tobago, and the Windward and Leeward Islands
⁷Arabia Peninsula States include Kuwait, Saudi Arabia, and Arabia Peninsula States, n e s
⁸Formerly reported as French Oceania
⁹Includes 5,561,000 pounds imported free, as an act of international courtesy, in 1944-45
¹⁰British West Africa includes Gold Coast, Nigeria, St Helena and dependencies, and Gambia and Sierra Leone
¹¹French Africa includes Algeria Tunisia, Cameroon, French West Africa, French Equatorial Africa, Madagascar, French Morocco, and French Somaliland
¹²Portuguese Africa includes Madeira and Cape Verde Islands, Mozambique, and Portuguese Guinea and Angola
¹³Bales of 478 pounds, net
¹⁴Tons of 2,240 pounds
¹⁵Other vegetable fibers include coir fiber, maguey or cantala, palmyra, piassava, palm leaf fibers, pulu, raffia, ramie or China grass, sunn, and fiber, n s p f
¹⁶Boxes of 76 pounds
¹⁷Crates of 2 45 cu ft
¹⁸Tons of 2,000 pounds
¹⁹Prior to Jan 1, 1945, included in China
²⁰January-June
²¹Bushels of 57 pounds
²²Bushels of 60 pounds
²³Includes milk or latex

Office of Foreign Agricultural Relations Compiled from official records, Bureau of the Census and of the United Tariff Commission Data for 1933-39 in Agricultural Statistics, 1942, table 696, and for 1940-43 in Agricultural Statistics, 1946, table 576

CHAPTER IX

FARM CAPITAL AND INCOME STATISTICS

The statistics in this chapter deal with farms, farm people, and the financial aspects of farming. Many of the series are estimates developed in research activities. Other series are primarily records of operations, such as certain data from agricultural credit agencies.

A number of new tables have been added this year. Among them are several which present farm-tenure statistics, developed from the 1945 Census of Agriculture. Also new are several tables presenting information on the prevalence of different grain-harvesting practices in various parts of the country. The over-all land utilization data in the first table (below) also are new.

TABLE 587.--Land utilization in the United States, census years 1880-1945¹

Major land uses ²	1880	1890	1900	1910	1920	1925	1930	1935	1940	1945

Other land outside farms (cities, roads, railroads, unused wasteland, etc.).....	118	120	123	125	128	132	132	133	137	149
Grand total land area ⁷	1,905	1,905	1,905	1,905	1,905	1,905	1,905	1,905	1,905	1,905

¹Compiled from census reports, publications and records of B.A.E., and public land administering and conservation agencies.

²Total farm land and total nonfarm land acreages are for the calendar year indicated. Cropland and pasture land acreages usually relate to the preceding year.

³Land used chiefly for crops, including cropland harvested, crop failure, fallow and idle cropland. To find land available for crops, add plowable pasture to cropland.

⁴Pasture and grazing land not in farms consists of land used chiefly for pasture and includes open or non forested pastures, and idle grassland in first decades, and arid woodland (pinon-juniper, chaparral), and shrub and brush pasture in all years.

⁵Forest land outside of farms used chiefly for commercial timber excludes forested areas included in parks, wildlife refuges, military areas, and recreation sites, and arid woodland and brushland used chiefly for pasture.

⁶Other land outside farms includes urban, industrial, and residential areas outside farms, parks, wildlife refuges, military lands, roads, railroads, ungrazed desert, rock, swamp, and other unused and wasteland.

⁷Complete remeasurement of the land area of the United States in connection with the 1940 Census indicated an approximate total land area of 1,905 million acres. Total areas for earlier census years, originally reported as 1,903 million acres, have been revised here.

TABLE 588 -- Farms, numbers, acreage of land in farms, cropland harvested, and value of farm land and buildings, United States, census years 1900-1945

Year	Farms	Land in farms	Farm land as percent of total land area	Cropland harvested, preceding year	Value of farm land and buildings
	Number	1,000 acres	Percent	1,000 acres	Billion dollars
1850	1,449,073	293,561	15.6		3,272
1860	2,044,077	407,213	21.4		6,645
1870	2,659,985	407,735	21.4		7,444
1880	4,008,907	536,082	28.2	166,187	10,197
1890	4,564,641	623,219	32.7	219,706	13,279
1900	5,737,372	838,592	44.1	283,218	16,615
1910	6,361,502	878,798	46.2	311,293	34,601
1920	6,448,343	955,884	50.2	348,604	66,316
1925	6,371,640	924,319	48.6	344,549	49,468
1930	6,288,648	986,771	51.8	359,242	47,860
1935	6,812,350	1,054,515	55.4	295,624	32,859
1940	6,096,799	1,060,852	55.7	321,242	33,642
1945	5,859,169	1,141,615	59.9	352,866	46,389

¹Prior to 1924, this column shows the total acreage of crops for which figures are available, except for 1919, when 14,502,932 acres of corn cut for forage were excluded (most of this was probably duplicated in the acreage of corn harvested as grain). Beginning with 1924 the figures represent the total cropland harvested.

Bureau of Agricultural Economics. Compiled from reports of Census of Agriculture, Bureau of the Census.

¹Unless otherwise stated, these data are estimates based on information furnished by farm families to the Bureau of Agricultural Economics, adjusted to the census data of 1920, 1930, 1935, and 1940, and since 1944 to the level of farm population of the United States as estimated cooperatively by the Bureau of the Census and the Bureau of Agricultural Economics on the basis of enumerative surveys. Estimates of changes in the farm population from 1930 through 1941 were revised in September 1942; estimates of changes during 1942 were revised in November 1944. For years prior to 1929, see Agricultural Statistics, 1942, table 720 for all figures except those on total population, which have been slightly revised.

¹Estimates of farm population and annual changes based on information furnished by farm families to the Bureau of Agricultural Economics, adjusted to 1940 census data and since 1944 to the level of farm population of the United States as estimated cooperatively by the Bureau of the Census and the Bureau of Agricultural Economics on the basis of enumerative surveys. Revised November 1944. For years prior to 1943, see Agricultural Statistics, 1942 and 1946, tables 721 and 584 respectively.

²Includes persons who returned directly to farms from the armed forces.

³Includes inductions and enlistments of men living on farms into the armed forces.

Bureau of Agricultural Economics.

FARM POPULATION AND DWELLINGS

501

TABLE 601 --Estimated farm population, by age and by sex for persons 14 years of age and over, April 1940, and quarterly dates January 1944 to January 1947¹

Year and month	Total farm population ²	Population not in institutions				
		All ages	Under 14 years	14 years and over		
				Both sexes	Male	Female

Bureau of Agricultural Economics. Estimates compiled by the Bureau from several Federal agencies. The basic population estimates are from the Bureau of the Census, with adjustments for underenumeration of children under 5 years of age in decennial censuses. For Jan. 1, 1941, and subsequent dates, figures on the net strength of the armed forces (supplied by the Bureau of the Budget) have been subtracted. For the period Jan. 1, 1941, through Jan. 1, 1946, an adjustment has been made to allow for members of the armed forces eating out of civilian supplies, the adjustment was originally estimated by OPA on the basis of data from several official sources.

NOTE: This table includes the figures used to estimate the per capita consumption of the food commodities, as shown in numerous other tables in this book.

TABLE 605 -- Farm employment Annual average number of persons employed, United States, 1929-48¹

Year	Total employment	Family workers ²	Hired workers	Year	Total employment	Family workers ²	Hired workers
	1,000 persons	1,000 persons	1,000 persons		1,000 persons	1,000 persons	1,000 persons
1929	11,289	8,305	2,984	1938	10,789	8,169	2,620

¹This tabulation shows workers brought into the United States through agreements with foreign governments. It does not include workers admitted to the United States under immigration and naturalization permits. During each quarter of the year there were repatriations and a few deaths.

Labor Branch, Production and Marketing Administration

FOOTNOTES FOR TABLE 607:

¹Adjusted to State annual statistical reports. Includes all sources of labor.

²Includes families placed as tenants and share croppers.

³Average of 2 placements for each of the estimated 2,305,000 individuals, consisting of 1,350,000 men, 370,000 women, and 585,000 youth.

Extension Service. Data for 1945 in Agricultural Statistics, 1946, table 592, and data for 1944 in the 1945 book, table 559.

FARM CAPITAL AND INCOME, 1947

Other crops	180	188	171	161	149	161	153	152
All crops	10,580	10,419	10,077	10,602	10,254	10,547	10,009	10,078
Farm maintenance ⁵	3,053	3,053	3,053	3,053	3,053	3,053	3,053	3,053
All farm work	20,609	20,475	20,233	20,931	20,713	20,877	20,357	20,228

¹Man-hours are in terms of the time required by average adult males to perform various farm tasks. Since many women, children, and older workers accomplish less in an hour than, an average adult male, actual hours of work on many enterprises are in excess of those shown.

²Preliminary

³Includes labor required for chickens raised, hens and pullets for egg production, broilers and turkeys

⁴Includes, in addition to the livestock listed above, the labor required for minor livestock enterprises, such as goats, bees, ducks, and geese

⁵Includes labor required for fencing, repairs to buildings, machinery and equipment, farm woods, pastures, general land maintenance, farm business, and other miscellaneous work. The time required increased for some of these items during the war and decreased for others but it is estimated that the total remained the same. Additional work on permanent improvements was probably needed but was postponed because of the scarcity of labor and material. Bureau of Agricultural Economics.

¹The farm in each group for which the return to labor is shown is the average of the most common sizes of farms of the type in the general region indicated. The averages are thus not affected by the activities of operators on farms larger or smaller than the group described, nor by production, prices, and costs of other groups of commodities than those common to the types indicated. Return to labor is the sum available for all labor (family, operator, and hired) after production expenditures other than labor have been met and appropriate credit has been made for the use of capital (land, buildings, machinery, equipment, and supplies) employed in the farm business. The hours of labor worked are quite different as between types, and hours are also influenced by labor-saving machinery used.

Bureau of Agricultural Economics.

TABLE 613 --Number of different persons who worked on farms for wages, days worked at hired farm work, and cash wages received, by sex of worker, 1945 and 1946

Year and sex of worker	Estimated farm wage workers ¹	Days of hired farm work performed		Cash wages for hired farm work	
		Average days per person	Aggregate days during year	Average per day worked	Average per worker for time worked in year
	<i>Thousands</i>	<i>Days</i>	<i>Millions</i>	<i>Dollars</i>	<i>Dollars</i>
1945, total . . .	3,212	96	310	3 00	287 00
Males	2,375	116	276	3 05	356 00
Females	837	40	34	2 35	94 00
1946, total . . .	2,770	113	313	3 45	391 00
Males	2,120	132	280	3 55	469 00
Females	650	51	33	2 75	139 00

¹Estimates relate to persons 14 years of age and over, in the civilian noninstitutional population in January following the year covered, who did farm work for wages during the year.

Allowances for groups not covered in the surveys (children under 14 years of age, prisoners of war, etc.) would raise the estimates of the total number of different persons who worked on farms for wages to 4,219,000 in 1945 and 3,520,000 in 1946.

Bureau of Agricultural Economics. Based on data from enumerative sample surveys made by the Bureau of the Census for the Bureau of Agricultural Economics.

¹The number of hired farm workers was about 43 percent higher in May 1945 than in March, 98 percent higher in September, 117 percent higher in July 1946, and 36 percent lower in January 1947 than in March 1945. Of the total number of hired farm workers on each date, 45 percent were seasonal workers (working less than 150 days on the reporting farm during the calendar year) in March 1945, 62 percent in May, 80 percent in September, 77 percent in July 1946, and 41 percent in January 1947.

²Includes custom work rates and annual rates

Bureau of Agricultural Economics. Estimates based on data from enumerative sample surveys.

¹Excludes perquisites paid share croppers and tenants working as hired farm laborers May 20-26, 1945, on their landlords' units and custom workers employed that week. The average daily value of perquisites is the value per day worked, i. e., the value of perquisites received in May divided by the number of days worked on the reporting farm during the month. Monthly values are derived from daily values and are based on 26 days of work during the month.

²One or more meals.

Bureau of Agricultural Economics. Estimates based on data from enumerative sample surveys.

¹Averages are not shown for rates that are infrequent at a given date.

²Rates are classified as "with meals" if 2 or more regular meals per day are furnished, rates that carry only 1 meal per day are classified as "without meals."

³Workers whom the farmer reported he would employ for 150 days or more during year

⁴Average hourly rates may differ slightly from their corresponding hourly cash wage equivalents for several reasons (1) slightly different coverage, as the equivalent wages were computed only for workers who reported on time worked, (2) weekly wages being rounded to the nearest dollar before computing equivalents, and (3) if a worker was paid at more than one rate during the week, the rate at which he worked the longest during the week was the one reported, but his cash wages included money earned at all rates.

⁵Workers whom the farmer reported he would employ less than 150 days during year. This group includes some workers for whom expected duration of employment was not reported. The majority of them were short-time seasonal laborers working in crews, for whom this information was not requested.

Bureau of Agricultural Economics. Estimates based on data from enumerative sample surveys.

¹Harvested acreage

²Includes acreage planted in fall of preceding year for harvesting in spring of year shown

³Short-time average. Estimates on grain sorghums for all purposes were discontinued in 1941 for all States except Texas and New Mexico.

⁴Actual acreage excludes asparagus harvested for processing in California for 1937 and 1938, plus certain other States from 1939 to date; and cabbage harvested for sauerkraut for all years

⁵Excludes artichokes, cauliflower, eggplant, escarole, kale, and shallots in 1946, and artichokes, escarole, and kale in 1947

⁶In terms of "pack" only

⁷Excludes pimientos.

⁸Actual acreages were derived by subtracting the B.A.E. estimates of wild hay for 22 States from the estimates of "all hay" for United States.

⁹Includes Austrian winter peas, hairy, common and Willamette Vetch, crimson clover, and common vetchgrass for all years, plus other kinds for which goals were set, varying by years

¹⁰Includes alfalfa, red, alsike, and sweet clover, and lespedeza for all years, plus other kinds for which goals were set, varying by years.

¹¹Does not include commercial production nor young chickens lost

¹²Production and Marketing Administration Actual figures for 1939-1944, except for slaughter items, have been revised by B.A.E. on basis of the 1945 Census of Agriculture, and changes have been made in certain States for other years.

¹Includes acreage planted in preceding fall for harvest in the year shown²Grain and sweet sorghums for all uses, including sirup³Acreage seeded in preceding fall.⁴Preliminary.⁵Acreage in cultivation July 1

⁶Includes harvested acreage of the following crops: Rye, hay, sweetclover seed, timothy seed, soybeans for beans, cowpeas for peas, peanuts picked and threshed, tobacco, sugarcane, broom-corn, and 21 vegetables (11 for processing - asparagus, snap beans, lima beans, beets, cabbage, sweet corn, cucumbers, peas, pimientos, spinach, and tomatoes, 19 for market: artichokes, asparagus, snap beans, lima beans, beets, cabbage, cantaloups, including Honey Dews, Honey Bells, and miscellaneous melons, carrots, cauliflower, celery, cucumbers, eggplant, lettuce, onions, peas, peppers, spinach, tomatoes, and watermelons). Alfalfa seed, red clover seed, Alsike clover seed, and lespedeza seed are included in the count of crops, but the acreage is not included because mostly duplicated in the hay acreage, the acreage of peanut hay, largely duplicated in peanuts picked and threshed, has been deducted. The harvested instead of the planted acreage of rye is included because most of the rye acreage not harvested is planted to other crops or used for pasture. Excludes grains cut for hay because part of the acreage shown as planted to wheat, oats, and barley is included in grain hay.

⁷Includes crops listed separately in this table, plus those mentioned in footnote 6

HARVESTED ACREAGE AND VALUE OF CROPS

TABLE 620.--Harvested acreage (average 1935-44) and farm value of principal crops, by States, annual 1944-46

¹Includes all corn, all wheat, oats, barley, rye, buckwheat, flaxseed, rice, sorghums for grain, sorghums for forage and silage, cotton, hay, timothy seed, sweetclover seed, dry edible beans, soybeans for beans, cowpeas for peas, peanuts picked and threshed, dry field peas, sorgo for sirup, sugarcane, sugarbeets, potatoes, sweetpotatoes, tobacco, broomcorn, artichokes, asparagus, snap beans, lima beans, beets, cabbage, cantaloupes (including Honey Dew melons, Honey Ball melons, and miscellaneous melons), carrots, cauliflower, celery, sweet corn, cucumbers, eggplant, lettuce, onions, green peas, peppers, pimentos, spinach, tomatoes, and watermelons. Red clover seed, alsike clover seed, lespedeza seed, and alfalfa seed are included in the count of crops, but the acreage is not included because it is mostly duplicated in the hay acreage. Farm value also includes apples (commercial crop), peaches, pears, cherries, cranberries, prunes, grapefruit, lemons, (California), limes (Florida), plums (2 States), all prunes, apricots (3 States), figs (2 States), olives (California), almonds (California), walnuts (2 States), pecans, maple products, and hops.

²Preliminary.

TABLE 621.--Total harvested acreage of principal crops, United States, 1929-46

¹Preliminary.²Asparagus, snap beans, lima beans, beets, cabbage, sweet corn, cucumbers, peas, pimientos, spinach, and tomatoes.³Artichokes, asparagus, snap beans, lima beans, beets, cabbage, cantaloups (including Honey Dew melons, Honey Ball melons, and miscellaneous melons), carrots, cauliflower, celery, cucumbers, eggplant, lettuce, onions, peas, peppers, spinach, tomatoes, and watermelons grown commercially for market. Excludes farm gardens and most market gardens.⁴Totals are for crops shown in preceding columns. Alfalfa seed, red clover seed, alsike clover seed, and lespedeza seed are included in the count of crops, but the acreage is not included because mostly duplicated in the hay acreage, the acreage of peanut hay, largely duplicated in peanuts picked and threshed, has been deducted. Other crops not included are sweet corn for market, some of the less important commercial vegetables (73,700 acres in 1946), farm gardens, most market gardens, hops, spelt, hemp, velvet beans, various legumes and other crops harvested by livestock, minor crops, and fruits and nuts. The acreages shown include some crops harvested in succession from the same land.⁵Preceding column plus estimates of acreages planted and not harvested because of abandonment, except that an allowance has been made for the grain harvested as hay.⁶Oranges (including tangerines), grapefruit, lemons, apples (all apples, 1929-33, in commercial areas only, 1934-46), peaches, pears, grapes, plums, prunes, apricots, cranberries, strawberries, figs, olives, avocados, almonds, walnuts, filberts, and pecans.

Bureau of Agricultural Economics. Data for 1909-28 (46 crops) in Agricultural Statistics, 1942, table 716. See total planted acreage in table 619.

Total 72 crops

¹Preliminary²Includes acreage planted in preceding fall³Value of "all wheat" differs slightly from sum of wheat by kinds because of rounding of "all wheat" price.⁴Acreage seeded in preceding fall⁵Acreage in cultivation July 1⁶Bags of 100 pounds (uncleaned).⁷Values apply to the production of cleaned beans or peas⁸Acres grown alone, plus one-half the interplanted acres⁹All purposes¹⁰1,000 trees tapped¹¹Short-time average¹²Includes some quantities not harvested

Values apply only to the harvested

portion of the crop

¹³Estimates of farm value apply to the entire crop, exclusive of that portion donated to charity, and/or eliminated in accordance with provisions of marketing agreements¹⁴Shelled beans¹⁵New York, New Jersey, and Pennsylvania¹⁶Excluding crops not harvested, minor crops, duplicated seed acreages, straw-berries, and other fruits¹⁷Total values do not include revisions made after December 1946, which are shown in this table

Bureau of Agricultural Economics

Figures in this table may not agree fully with similar data in the specific commodity tables

¹Excluding motor vehicles

²1912-14=100

Bureau of Agricultural Economics Compiled from prices reported to the Department of Agriculture by retail dealers throughout the United States. The prices used in constructing the above index numbers of prices paid by farmers are for constant quantities and sizes but are not adjusted for changes in quality.

The index numbers include only commodities bought by farmers, the commodities being weighted according to purchases reported by farmers in farm-management and rural-life studies from 1924 to 1929. These data are published monthly in Agricultural Prices. Annual data for 1910-28 in Agricultural Statistics, 1946, table 606.

TABLE 628 -- Index numbers of prices received by farmers, by groups, United States, 1929-48¹
(August 1909=July 1914=100)

¹A discussion of the construction of this index and the monthly index numbers through 1943 were published in Index Numbers of Prices Received by Farmers, 1910-43, issued February, 1944 (processed)

²Adjusted to the 1924 level of the all-commodity index

Bureau of Agricultural Economics Compiled from prices reported to the Department of Agriculture by dealers purchasing agricultural commodities in local farm markets. The price series for individual commodities are averages for all classes and grades of the commodity being sold in local farm markets on or about the 15th of each month. They are weighted by average sales for the 5 years, 1935-39. These data are published monthly in Agricultural Prices. Annual data for 1910-28 in Agricultural Statistics, 1946, table 607.

¹Revised. Prior to 1926 designated as "Chemicals and drugs."

²Includes automobile tires and tubes, cattle feed, paper and pulp, crude rubber, barrels, batteries, caskets, cigar boxes, matches, mirrors, oil, pipe covering, rubber heels, rubber hose, men's rubbers, soap, starch, tobacco products, and wax.

Bureau of Agricultural Economics Computed by reducing to a 1910-14 base the Bureau of Labor Statistics series, 1926=100, the index numbers for each group on the 1926 base are divided by the averages for 1910-14. The averages used for each group are as follows: Farm products, 71.3; foods, 64.5; hides and leather products, 64.5; textile products, 56.3; fuel and lighting, 52.7; metals and metal products, 85.3; building materials, 55.2; chemicals and drugs, 81.2; house furnishing goods, 54.6; miscellaneous, 110.1; other than farm products, 67.5; raw materials, 65.36; and all commodities, 68.5. Data for 1910-28 in Agricultural Statistics, 1946, table 608.

¹Data available prior to 1930

²Average price of sweet cherries for fresh use and processing, data not available to show break-down according to use for which data were not available

³Season average, 1919-28, excluding 1927 for which data were not available

⁴Open-market prices for fresh use and average prices for all parities in other States combined

⁵Data for dried peaches relate only to freestone peaches in the base period, but prices in other periods apply to clingstone and freestone peaches combined

⁶Pacific coast pears for fresh use and average for all pears in other States combined

⁷Oregon, Washington and Louisiana strawberries for fresh use and prices of all strawberries in other States combined

⁸Oregon only market prices, prices received by farmers not available

⁹Simple average of each grade, August 1909-July 1914, weighted by sales of each grade 1909-12 seasons, data not available for marketing in 1913 season

¹⁰Open-market price

¹¹Bureau of Agricultural Economics

¹²Parity prices of agricultural commodities were first computed to interpret quantitatively the progress of the effort to restore farm purchasing power under the Agricultural Adjustment Act of 1933. Assuming no changes in the efficiency of production, parities may be defined as "fair exchange values" which will maintain the same relationship between the price of agricultural commodities and prices of articles farmers buy as existed in some base period, usually August 1909-July 1914. Subsequent acts have altered this concept, but little has been done to alter the basic concept.

¹³The basis for the determination of parity prices of agricultural commodities is the average of the prices received by farmers for the commodity per acre. Comparable prices determined under section 4 (a) of Public Law No. 147 have been substituted for parity prices for three commodities, where the production or consumption of the commodity had so changed in character since the base period as to result in a price out of line with parity prices for basic commodities. Parity prices are now published for some 13 other commodities for which comparable prices were formerly calculated under section 3 (b) of the Emergency Price Control Act of 1942, which provided June 30, 1942, as the date for determining parity prices.

¹⁴Parity prices are calculated by multiplying the price of the commodity in the base period by the index of prices paid, excluding interest and taxes, adjusted to the base 1919-29¹⁵ 100 is employed in the computation. Comparable prices are calculated similarly after an adjustment in the base price has been made to bring the result in line with parity prices of basic commodities.

¹⁵The average number of pounds per box, per crate, or other unit, is given on pages 4 and 5 of this book.

¹Average 1935-39 farm prices in each geographic division were used as weights in constructing indexes for each geographic division. United States totals were obtained by summing the geographic division quantity-price aggregates.

²The index of gross farm production measures calendar-year production of all crops and pasture consumed by all livestock, and the product added in the conversion of feed and pasture into livestock and livestock products for human use and into farm-produced horse and mule power.

³Farm output is gross farm production minus farm-produced power of horses and mules. The index of farm output measures calendar-year production of farm products for human use.

⁴Farm-produced power production is equal to the estimated cost (including depreciation) at 1935-39 average prices of raising and maintaining farm horses and mules each year. Farm-produced power production includes the feed and pasture consumed by horses and mules, and the product added in converting this feed and pasture into animal power.

⁵Products added by livestock was derived by subtracting the estimated value, at 1935-39 average prices, of all feed (including commercial feeds) and pasture consumed by each class of livestock from the total value, at 1935-39 average prices, of livestock and livestock products.

⁶Includes some miscellaneous crop production not included in separate crop groups shown.

⁷Corn, oats, barley, grain sorghum, tame hay, wild hay, sorghum for forage, and estimated pasture consumed by all livestock.

⁸Wheat, rye, rice, and buckwheat.

⁹Commercial truck crops for fresh market shipment (except commercial early Irish potatoes and strawberries) and processing, market gardens, and farm gardens.

¹⁰Potatoes (Irish), sweetpotatoes, dry edible beans, and dry peas.

¹¹Sugar beets, sugarcane for sugar and seed, sugarcane sirup, sorgo sirup, maple sugar, and maple sirup.

¹²Soybeans for beans, peanuts, and flaxseed.

¹³Preliminary.

Bureau of Agricultural Economics, Division of Farm Management and Costs. Gross farm production and total farm output cover all production of the calendar year without duplication, but allowances have been set up for production not regularly reported in the available statistical series.

¹The indexes measure total crop production, pasture consumed by all livestock, and the product added in the conversion of feed and pasture into livestock and livestock products for human use and into farm-produced horse and mule power. The product-added method of combining crop and livestock production credits crop production to the geographic division in which the feed was grown, and credits livestock "manufacturing" production (product added) to the geographic division in which the feed was fed. Product added by livestock was derived by subtracting the estimated value, at 1935-39 average prices, of feed and pasture consumed by each class of livestock from the total value, at 1935-39 average prices, of livestock and livestock products.

The indexes of gross farm production measure calendar-year total production of each geographic division.

¹Recent revisions prior to 1940 not incorporated, as more comprehensive revisions are contemplated within the coming year.

²Includes expenditures for gasoline, oil, tires, and labor for repairing tractors, and gasoline, oil, tires, replacement parts, labor for repairs, registration fees, and insurance for automobiles and trucks. Only 40 percent of the total operating costs of automobiles is included as a production expense for 1929-41 and 1946, 50 percent for 1942-45.

³Estimated total amount that would need to be spent annually by farmers for labor and materials in order to maintain the condition of buildings, machinery, and equipment on farms at the beginning of the year in a constant state of repair.

⁴Cash wages and the value of perquisites supplied to hired farm laborers.

⁵Includes taxes levied against farm real estate and farm personal property.

⁶Interest charges payable during the calendar year on outstanding farm-mortgage debt.

⁷Gross rent paid to nonfarm landlords, including Government payments, minus the expenses of agricultural production charged against them. Beginning with 1940, farm mortgage interest paid by nonfarm landlords is also deducted. For earlier years, this item is duplicated in the farm mortgage interest series.

⁸Includes expenditures for horses and mules, insecticides, containers, twine, ginning, seeds and nursery stock, miscellaneous expenditures for operation of greenhouses and nurseries, electricity for production, gasoline, oil, and repairs for operating stationary gasoline and steam engines; grazing fees, irrigation charges, fire, windstorm, hail, and crop insurance, veterinary services and medicines, miscellaneous dairy supplies, blacksmithing and miscellaneous hardware supplies, short-term interest, and tolls for boiling down sugarcane sirup and sorgo sirup.

⁹Preliminary.

¹ Recent revisions prior to 1940 not incorporated, as more comprehensive revisions are contemplated within the coming year

² Column 1 minus column 2

³ An adjustment to gross income for sales out of inventory or for the net addition to inventories from production during the year. Computed by valuing changes in the numbers of livestock on farms and in the quantities of crops held for sale from one Jan 1 to the next by prices at the end of the year

⁴ Cash wages and value of perquisites supplied to laborers, distributed according to place of residence

⁵ Includes net income of farm operators from farming, adjustment for changes in inventory, and farm wages to farm laborers living on farms (total of columns 3, 4, and 5).

⁶ Interest charges payable during the calendar year on outstanding farm-mortgage debt.

⁷ Gross rent paid to nonfarm landlords minus the expenses of agricultural production charged against them. Beginning with 1940, farm mortgage interest paid by nonfarm landlords is also deducted. For earlier years, this item is duplicated in the farm mortgage interest series

⁸ Includes net income to persons on farms from farming and other income from agriculture (column 6 plus column 10).

¹Recent revisions prior to 1940 not incorporated, as more comprehensive revisions are contemplated within the coming year.

²Estimates for 1929-45 prepared from income estimates of the Department of Commerce. Original data were adjusted to be comparable throughout, and minor adjustments were made in estimates of nonagriculture income so that the method of computation and sources of income included would be more nearly in agreement with those used in estimating agriculture's contribution to the national income.

³Includes net income of farm operators from farming and farm wages to laborers living on farms.

⁴The income of the nonfarm population as shown here is national income minus the net income of persons on farms from farming (column 1 minus column 2). Income of persons from nonagricultural sources has not been deducted.

⁵The population on farms includes all persons enumerated on farms in the taking of the census, whether or not they were engaged in farming, adjusted to Jan. 1 in the years when the census was not taken as of Jan. 1. Estimates for the intercensal years were made by the Department of Agriculture.

⁶Total population Jan. 1, less the farm population.

⁷Obtained by dividing the index number of income per person on farms from farming by the index number of income per person not on farms (column 8 divided by column 9). This provides a measure of the relation of the net income of individuals on farms from farm operations to the income of individuals not on farms, as specified in the Agricultural Adjustment Act of 1938.

¹These payments are already included in the columns showing gross rent and net rent

²Preliminary

Bureau of Agricultural Economics

FOOTNOTES FOR TABLE 643

¹Estimates of cash receipts measure the amount of money received by farmers during the calendar year from the sale of the different farm products. Commodities used for human consumption on the farms where grown are valued at the average price received by farmers for the commodities sold

²Cash receipts include value of broilers consumed in households of producers, which is less than 1 percent of total production.

³Ducks, geese, guineas, pigeons, quail, and pheasants.

⁴Value of dairy products consumed on farms is not available for separate items; total value is determined by applying milk-equivalent price received for products sold to total milk consumed on farms

⁵Horses, mules, mohair, honey, bees, (1943-45), and beeswax (1944 and 1945).

⁶Cash receipts include sales from market and farm gardens as well as commercial truck crops. Home consumption includes the value of all products grown in farm gardens for farm family use, not included elsewhere.

⁷Dates, persimmons, pineapples, pomegranates, miscellaneous fruits, and also fruits listed here that are grown in noncommercial States

⁸Austrian winter peas, common and perennial ryegrass seeds, hairy, common, Willamette, Hungarian, and purple vetch seeds

⁹Bermuda grass, blue lupine, bromegrass, crested wheatgrass, crimson clover, Kentucky bluegrass, ladino clover, meadow fescue, mustard, orchard grass, rape, redtop, Sudan grass, sunflower, and white clover seeds

¹⁰Forest, greenhouse, and nursery products; broomcorn, hemp, peppermint, spearmint, and popcorn

¹¹Payments under agricultural conservation, Sugar Act, price adjustment, price parity, and production program

¹Quantities of nutrients computed by bureau of Human Nutrition and Home Economics on the basis of estimates of apparent consumption (retail basis), including estimates of foods supplied by farm and city gardens, prepared by Bureau of Agricultural Economics. No deductions have been made in the nutrient estimates for the loss or waste of food in the home or for destruction or loss of nutrients during the preparation of food.

In 1942-46, the data for iron, thiamine, riboflavin, and niacin include the amounts of these nutrients added to prepared cereals and to white flour (or bread) under the enrichment program. For 1947, enrichment was estimated to be the same as in 1946.

²Civilian only.

³Preliminary August 1947 estimate.

⁴Preliminary February 1948 estimate.

¹These estimates are calculated in terms of a market basket of farm food products, containing quantities equivalent to 1935-39 annual average purchases per family of three average consumers. The market basket total is broken down into six major commodity groups, as shown in the succeeding table. Quantities of foods valued in these series do not change from year to year.

²Retail costs of the market basket and commodity groups are calculated from prices estimated to represent average cost to all purchasing consumers in the United States. These are based principally upon retail price series published by the Bureau of Labor Statistics and the Bureau of Agricultural Economics, with supplementary adjustments.

³Farm value is calculated from official series showing prices received by farmers applied to quantities of farm products equivalent to retail purchases and is adjusted by subtracting an imputed value at the farm level of nonfood by-products obtained in processing. No adjustment is made for various Government payments to producers.

⁴The marketing margin is the spread or difference between retail cost to consumers and payments to farmers for equivalent produce, less imputed value of byproducts.

⁵For the quantities of products included in the market basket, total Government taxes levied upon processors and other marketing agencies are denoted by a minus sign, while total payments to marketing agencies are denoted by a plus sign.

⁶Marketing charges equal the marketing margin, minus Government marketing taxes, plus Government marketing payments, and represent total payments to marketing agencies for their services.

⁷The farmer's share of the consumer's dollar spent for farm food products is obtained by expressing the farm value as a percentage of retail cost. The remainder of the consumer's dollar goes to pay the marketing margin and does not include Government payments to marketing agencies but does include Government taxes on these agencies.

¹ Preliminary estimates. In computing averages, data were weighted by acreage harvested.

² Obtained by dividing total pounds of production of 500-pound gross-weight bales by acreage harvested.

³ Includes hauling and spreading manure.

⁴ Includes picking and snapping cotton.

⁵ Includes miscellaneous labor, irrigation (including water), dusting, picking sacks and sheets, use of implements, use of storage buildings, overhead, and a charge for expenses incurred on acreage abandoned because of crop failure.

⁶ Includes a charge for rent on the acreage not harvested because of crop failure.

⁷ Estimated cost in 1945. If cotton yield and acreage abandonment had been the average of 1935-44. The average United States yield per harvested acre in that period was 256 pounds of lint (gross weight).

⁸ Includes the lower and upper coastal plain of Virginia, North Carolina, South Carolina, and the lower Mississippi valley.

⁹ Includes the rolling and hilly uplands of Virginia, North Carolina, South Carolina, Georgia and Alabama, which border the Blue Ridge Mountains on the east and south.

¹⁰ Includes Tennessee exclusive of Lake County, the hilly cotton lands of northern Mississippi, northern Alabama, and northern Georgia, and western North Carolina.

¹¹ Includes the principal bottom lands of the Mississippi, the Arkansas, and the Red Rivers.

¹² Includes the hilly lands of Arkansas, Louisiana, southern Missouri, eastern Texas, and the Gulf-coast prairie of Texas and Louisiana, and the black waxy prairie of Texas.

¹³ Includes the dry-land areas of western Oklahoma, western Texas, and eastern New Mexico.

¹⁴ Includes California the upland cotton of Arizona and the irrigated cotton of New Mexico and Texas.

¹⁵ Includes all cotton in Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Mississippi, Louisiana, Arkansas, Missouri, Oklahoma, Texas, New Mexico, California, and the upland cotton of Arizona. These States produced 99.9 percent of the United States cotton crop of 1945.

Bureau of Agricultural Economics

Preliminary estimates. States grouped mainly on basis of production practices and yields. In computing averages, data were weighted by acreage harvested.
 Includes hauling and spreading manure.
 Includes threshing for wheat and oats.
 Includes charges for water for irrigation, twine and sacks, use of implements, use of storage buildings, overhead including a small amount of miscellaneous labor; and a charge for expenses incurred on acreage abandoned because of crop failure.
 Includes a charge for rent on the acreage not harvested because of crop failure.
 Estimated costs in 1945 if yields and abandonment had been the average of 1935-44. The average United States yield per acre harvested in that period was for corn for grain 29.0 bushels, for wheat 15.3 bushels, and for oats 30.4 bushels.

Includes the 6 New England States, and New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, Kentucky, and Tennessee
 Includes North Carolina, South Carolina, Georgia, Florida, Alabama, and Mississippi.
 Includes Arkansas, Louisiana, Oklahoma, and Texas
 Includes Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, and California
 Includes the 6 New England States, and New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, and Kentucky
 Includes North Carolina, South Carolina, Georgia, Tennessee, Alabama, Mississippi, and Arkansas
 Includes Idaho, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, and California

¹This column has been revised to exclude data for engines, domestic water systems, farm pumps and windmills, lawn mowers, electric lighting plants, wheelbarrows, irrigation equipment, horse and mule shoes, calks and nails, harness and saddlery hardware, stock tanks, barn door track and hang-ers, and farm gates. Includes tractors for farm and non-farm use.

²All figures for 1931 include exports and domestic sales combined

³Census not taken

⁴1941 and later figures for internal combustion engines are not comparable with previous years since some manufacturers reported only engines for agricultural purposes prior to 1941.

⁵For agricultural, industrial, and military use.

Bureau of Plant Industry, Soils, and Agricultural Engineering. Compiled from reports of the U.S. Department of Commerce.

TABLE 654 --Percentage of acreage of small-grain crops harvested by specified method, and utilization of small-grain straw, by States and State groups, crop of 1945¹

State and group	Total acreage harvested in 1945	Percentage of 1945 acreage that was-			Straw production in 1945 that was recoverable for use on farm or for sale ¹	Percentage of recoverable straw in 1945 that was-		
		Combined-		Threshed with stationary threshers or cut and fed unthreshed		Used on farms or sold as baled straw	Used on farms or sold as loose straw	Left in field or otherwise not used
		As standing grain	From wind-row

¹Ground limestone. Other materials converted to this basis. Data based on surveys made by State agricultural college agronomists. Includes county surveys of producers and data from county extension agents and AAA offices. Data for 1929-1936 in Agricultural Statistics, 1945, table 601, and for 1937-1941 in Agricultural Statistics, 1946, table 645.

²Preliminary.

³Includes fertilizer distributed by the AAA and the Tennessee Valley Authority. Compiled from reports of National Fertilizer Association. Data for 1935-41 in Agricultural Statistics, 1945, table 602.

⁴Includes limestone screenings, used in some counties, which is coarser than ground limestone in the usual meaning.

⁵Revised.

Production and Marketing Administration and Bureau of Agricultural Economics.

¹ Levies rather than payments are shown for property taxes because data for payments are not available for many States. For the country as a whole levies and payments probably are about equal over long periods.

² Includes taxes levied against motor vehicles under general property tax laws.

³ Includes Federal motor vehicle use taxes.

¹Farm Credit Administration.

²In computing rates, each farm credit district is given equal weight, but within each district rates are weighted by number of days in force.

³Contract rates on loans through national farm loan associations. Temporarily reduced rate in effect between July 11, 1933, and June 30, 1935, was 4.5 percent, and between July 1, 1935, and June 30, 1944, 3.5 percent.

⁴Based on bonds outstanding on Dec. 31, each year, excluding bonds owned by the issuing agency.

⁵Average of daily yields on asked prices of all long-term issues, except those callable in 5 years or less. Average for 1946 based on yields on bonds issued after Jan. 31, 1945, and due or callable between 1948 and 1955, these yields are to call date where price was above par, but to maturity where price was at or below par.

⁶Contract rate. Temporarily reduced rate in effect between July 22, 1937, and June 30, 1940, was 4.0 percent, between July 1, 1940, and June 30, 1944, was 3.5 percent, and between July 1, 1944, and June 30, 1945, was 4.0 percent.

⁷Average of daily yields on all outstanding issues with a minimum original term of 7 years or more.

⁸Based on debentures issued during the year.

⁹Board of Governors of Federal Reserve System.

¹⁰Prevailing open-market rates in New York City.

¹¹Discount rates on advances secured by Government obligations maturing or callable beyond 1 year and discounts of and advances secured by eligible paper.

¹²All outstanding bonds from May 1, 1941, to Feb. 1, 1945, were callable in 5 years or less. Yield for 1945 not shown because of refinancing activities.

¹³Excludes two issues quoted on a negative yield basis.

¹⁴A rate of one-half of 1 percent was effective from Oct. 30, 1942, to Apr. 23, 1946, on advances secured by Government obligations maturing or callable in 1 year or less.

¹⁵Both of the bond issues included were callable in 1944.

¹⁶Represents only one issue of bonds.

¹⁷After May 15, 1944, all outstanding bonds were held by United States Treasury.

Bureau of Agricultural Economics.

¹Continental United States only.²1930-47, includes regular mortgages, purchase-money mortgages, and sales contracts, prior to 1930, includes regular mortgages only.³Loans held by Federal Farm Mortgage Corporation are made on its behalf by Land Bank Commissioner. Joint-stock land banks have been in liquidation since May 12, 1933. Includes banks in receivership.⁴Formerly Farm Security Administration. Prior to 1941, includes only tenant-purchase loans and construction loans to individuals. Beginning with 1941, includes farm-development (special real estate) loans; beginning with 1944, includes farm-enlargement loans, for 1944-46 includes flood and windstorm real estate restoration loans, and beginning with 1946, includes project-liquidation loans. Loans made for these purposes from State Rural Rehabilitation Corporation trust funds are included.⁵1935-47, insured commercial banks, prior to 1935, all open State and national banks.⁶Revised.

Bureau of Agricultural Economics.

See footnotes on next page

¹Includes regular mortgages, purchase-money mortgages, and sales contracts.

²Loans held by Federal Farm Mortgage Corporation are made on its behalf by Land Bank Commissioner.

³Formerly Farm Security Administration. Includes tenant-purchase and farm-enlargement loans, farm-development loans, construction loans to individuals, flood and windstorm real estate restoration loans, in 1946, and project liquidation loans. Also includes loans made for these purposes from State Rural Rehabilitation Corporation trust funds.

⁴Includes loans held by joint-stock land banks, commercial banks, individuals, and miscellaneous lenders. See table 677, for State data on loans held by commercial banks (classified by location of bank rather than by location of security or borrower).

⁵Revised.

⁶Includes District of Columbia.

Bureau of Agricultural Economics.

Continental United States only.

Beginning 1935, includes loans to individuals covered by purchase agreements with Commodity Credit Corporation, beginning 1942 includes certificates of participation in pool of cotton growers' notes; and also includes some advances to Commodity Credit Corporation in connection with purchase programs. Such items totaled \$102,139,000 on Jan. 1, 1947.

Loans made include renewals.

⁴Before 1947, included loans of associations in liquidation. Outstanding loans on Jan. 1, 1947, are for 504 active associations. Loans of \$3,307 of 4 associations in liquidation are excluded. Loans subject to repurchase agreement with Commodity Credit Corporation are excluded.

*With Community Credit Corporation are excluded.
 †Excludes loans to and discounts for production credit associations, regional agricultural credit corporations, and banks for cooperatives which are shown in table 688.

Loans subject to repurchase agreement with Commodity Credit Corporation are included.

⁷Succeeded Farm Security Administration on Nov. 1, 1946.

Program began Nov. 1, 1946.

⁵Loans outstanding include loans from State rural rehabilitation corporation and loans made by Resettlement Administration.

Loans made to individuals, including rural rehabilitation, production restoration and water facilities.

ration, and water facility loans.
Includes drought-relief and orchard-rehabilitation loans.

^aLoans "outstanding" are cumulative net advances, less principal repayments, loans "made during year" are net advances, after deducting return of unused loan funds which returns during 1946 totaled \$49,600 by cooperative borrowers and \$1,400 by other borrowers from gross advances

and \$1,400 by other borrowers from gross advances. Approximately 77 percent of individuals served by these cooperatives are farmers.

crs
*Principally loans to public bodies and to power companies for rural electrification

¹Includes loans made directly by Commodity Credit Corporation and guaranteed loans purchased from banks and other lending agencies. This series is not fiction

FOOTNOTES FOR TABLE 676

¹Commercial bank loans are classified by location of bank, those for federally-sponsored agencies by location of security or borrower.

²Includes loans which are direct obligations of Commodity Credit Corporation, totaling \$102,139,000 as follows: Guaranteed loans to individuals, certificates of participation in cotton producers' pool, and some advances to Commodity Credit Corporation in connection with purchase programs. Data not available for loans made.

³504 active associations. Loans of \$3,397, held by 4 associations in liquidation, excluded. Loans subject to repurchase agreement with Commodity Credit Corporation are excluded.

⁴Loans made include renewals.

⁵Excludes loans to and discounts for production credit associations, regional agricultural credit corporations, and banks for cooperatives which are shown in table 688. Loans made include \$6,000,000 and \$5,579,000 to cooperatives in New York and California, respectively. Loans outstanding include \$2,200,000 to cooperatives in New York and \$1,950,824 in California.

⁶Loans subject to repurchase agreement with Commodity Credit Corporation are included.

⁷Succeeded Farm Security Administration on Nov. 1, 1946

⁸Program began Nov. 1, 1946.

⁹Loans outstanding include loans from funds of State rural rehabilitation corporations and loans by Resettlement Administration.

FOOTNOTES FOR TABLE 677

¹Loans classified by location of bank and not by location of security or borrower.

²Includes loans to individuals covered by purchase agreements with Commodity Credit Corporation and certificates of participation in pool of cotton growers' notes; also includes some loans to Commodity Credit Corporation in connection with purchase programs.

³Loans made to individuals, including rural rehabilitation, production restoration, and water facility loans.

⁴Includes drought-relief and orchard-rehabilitation loans. Loans made include 1947 production loans made in 1946.

⁵Loans "outstanding" are cumulative net advances, less principal repayments, loans "made during year" are net advances, after deducting returns of unused loan funds, which returns during 1946 totaled \$49,600 by cooperative borrowers and \$1,400 by other borrowers from gross advances.

⁶Approximately 77 percent of individuals served by these cooperatives are farmers.

⁷Primarily loans to public bodies and to power companies for rural electrification.

⁸Includes all loans made and guaranteed. Insofar as possible loans are distributed by location of borrower. Cotton loans, however, are distributed according to the location of cotton. Loans outstanding not available by States.

⁹Less than \$500

¹⁰Includes \$11,479 which cannot be allocated by States

¹¹Includes \$3,402 which cannot be allocated by States

¹²Includes \$18,344 which cannot be allocated by States.

Bureau of Agricultural Economics.

tion with purchase programs. Such loans and certificates totaled \$102,139,000 on Jan. 1, 1947.

⁴Alaska, Hawaii, and Virgin Islands.

Bureau of Agricultural Economics.

¹Acquired by foreclosure or other "distress" transfers from borrowers. Continental United States only.

²Investment. Includes sheriffs' certificates and judgments, but excludes prior liens.

³Book value, partially estimated.

⁴Carrying value of real estate, including sheriffs' certificates and judgments. Real estate held by banks in receivership is included at book value.

⁵Book value. Data represent holdings of insured commercial banks.

⁶Investment. Rural Credit Board of South Dakota, Bank of North Dakota, and Department of Rural Credit of Minnesota. The large reduction during 1945 is mostly due to a charge-off of approximately \$27,000,000 of cumulated losses by the Rural Credit Board of South Dakota upon completion of liquidation.

⁷Data unavailable.

⁸Amount held on June 30.

Bureau of Agricultural Economics.

			Total	112,607	288,094

¹Includes production restoration loans, wartime adjustment loans, and loans from State Rural Rehabilitation Corporation trust funds

Farmers Home Administration. In addition to loans shown in this table, during 1946 \$32,854 was advanced as grants to individuals, distributed as follows: Florida \$170, Arkansas \$195, Texas \$5,950, Puerto Rico \$11,572, Virgin Islands \$14,922.

TABLE 700 --Farmers Home Administration: Status of the average active water facilities borrower, United States, 1945¹

Item	Unit	1945	Item	Unit	1945
Number of active borrowers	Number	1,442	Small grain, production per acre	Bushels	37
Percent with irrigation facilities ²	Percent	23	Corn, production per acre ³	Bushels	41
Percent with farmstead facilities only	Percent	77	Crop sales	Dollars	1,324
Size of farm, all water facilities borrowers	Acres	265	Livestock sales	Dollars	986
Land in crops, all water facilities borrowers	Acres	100	Livestock product sales	Dollars	1,154
Irrigation borrowers ⁴	Acres	105	Production for home-use		
Farmstead-only borrowers	Acres	98	Dairy products	Gallons (equivalent)	562
Acres irrigated, irrigation borrowers ⁵	Acres	81	Eggs	Dozens	156
Cattle and calves sold ⁶	Number	9	Meat	Pounds (dressed)	549
Hogs sold ⁶	Number	13	Total farm income	Dollars	4,049
Poultry sold ⁶	Number	141	Farm operating expenses	Dollars	1,726
Eggs sold ⁶	Dozens	1,027	Net farm income	Dollars	2,323
Dairy products sold ⁶	Gallons (equivalent)	5,374			

¹Data based on a sample of active water facilities borrowers who met the following conditions (a) on same farm with same acreage in 1945 as during crop year before water facilities installation, (b) installation of facilities completed in time to provide full benefits during the 1945 crop year

²Water facilities loans have been made in the following 17 Western States: Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming.

³Includes those borrowers with loans for both irrigation and farmstead facilities

⁴Average based on reports of farmers raising specified kind of livestock

⁵Crop production is reported by irrigation borrowers and is limited to production on land irrigated in 1945. Crop production information was not obtained for borrowers with loans for farmstead facilities only

¹Includes loans made directly by Commodity Credit Corporation and guaranteed loans made by banks and other lending agencies. Renewals and extensions of loans previously made are excluded. These are face amounts only, storage advances are not included.

²Partly estimated.

³Loans to the Cotton Producers Pool were second-lien advances on cotton in the pool. The 1933 advance was \$20 per 500-pound bale and the 1934 advance was an additional \$10 on cotton remaining in the pool. The number of bales involved is excluded from the quantities placed under loan.

Commodity Credit Corporation.

United States	2,693	36,433	41,775	108,343	189,244	695,037	2,082,018	1,718,893	429,782	4,925,874

¹Includes loans made directly by the Commodity Credit Corporation and guaranteed loans made by banks and other lending agencies. Renewals and extensions of loans previously made are excluded. These are face amounts only, storage advances are not included. As far as possible, loans have been distributed according to the location of producers receiving the loans. Direct loans to cooperative associations for the benefit of members have been distributed according to the location of the association.

²This amount was advanced to producers in the fall of 1938, when an estimated 14,000,000 bushels of 1937 corn were placed under loan. A distribution by States is not available.

³Includes the 1933 cotton loans of \$99,498,000, for which State data are not available.

Commodity Credit Corporation

TABLE 704 --Commodity Credit Corporation Inventory of commodities owned by the Corporation, Dec. 31, 1946

Commodity	Unit of quantity	Quantity ¹	Book value ²	Commodity	Unit of quantity	Quantity ¹	Book value ²
			Dollars				Dollars
Barley.....	Bushels	1,248,272	2,212,090	Wheat	Bushels	42,654,606	90,439,066

¹Includes independent local associations, federations, large-scale centralized associations, and sales agencies.

²The membership estimates include members, contract members, and shareholders, but do not include patrons not in these categories. (There is some duplication in these membership figures due to the fact that some farmers belong to more than one association.)

³Includes the value of commodities sold or purchased for patrons and the service charges for associations rendering other essential service either in marketing or purchasing.

⁴Reports of associations are included either for the calendar year or for fiscal periods beginning within the calendar year shown. The latter are classified with that calendar year in which most of the business occurred.

⁵Data for 1936 season are from a survey made by the Farm Credit Administration in cooperation with the district banks for cooperatives and 33 State Agricultural Colleges.

⁶After making adjustments for the purchasing business of the marketing associations and the marketing business of the purchasing associations, it is estimated that the total purchasing business was about as follows: 1936 season, \$313,400,000, 1937 season, \$440,000,000, 1938 season, \$415,000,000, 1939 season, \$448,200,000, 1940 season, \$450,000,000, 1941 season, \$600,000,000, 1942 season, \$750,000,000, 1943 season, \$1,010,000,000, 1944 season, \$1,095,000,000, 1945 season, approximately \$1,220,000,000.

Farm Credit Administration. Based on records from associations reporting to the Administration.

Purchasing	2,750	2,772	1,610,000	1,860,000	810,000	923,000
Total marketing and purchasing	10,150	10,150	4,505,000	5,010,000	5,645,000	6,070,000

¹Reports of associations are included either for the calendar year or for fiscal periods beginning within the calendar year shown. The latter are classified with that calendar year in which most of the business occurred.

²Includes independent local associations, federations, large-scale centralized associations, sales agencies, and independent service-rendering associations.

³Includes members, contract members, and shareholders, but does not include patrons not in these categories.

⁴Includes some intrasociation business.

⁵Includes the value of commodities sold or purchased for patrons and the service charges for associations rendering other essential services either in marketing or purchasing.

⁶Includes ginned cotton, cottonseed, cottonseed oil, cottonseed meal, etc.

⁷Includes some Government loan cotton.

⁸Includes associations handling commodities not specified above, those handling several types of commodities and those furnishing special services.

⁹After adjustments for purchasing business by the marketing associations and marketing business by the purchasing associations, the totals for purchasing business are: 1944, \$1,095,000,000, 1945, approximately, \$1,220,000,000.

AGRICULTURAL CONSERVATION AND ADJUSTMENT STATISTICS

Statistics in this chapter concern conservation of various resources, particularly soil, water, and timber. Also included are historical data on crop adjustment and parity payments to farmers, as well as land use. New tables this year relate to soil surveys and group-enterprise plans of the Soil Conservation Service.

Recently the Forest Service has made wide reappraisals of all forest lands and products and the annual "drain" on forest resources. Results of these investigations are included herein, along with data on road construction and recreational use of national forests.

TABLE 721.--Payments under agricultural conservation and parity-payment programs, by program years, 1940-46¹

Commodity and program	1940	1941	1942	1943	1944	1945	1946 ²

¹Payments under the 1945 program with respect to these practices represent about 84 percent of the total 1945 practice payments. Practices carried out in Alaska, Hawaii, and Puerto Rico are not included.

²Less than 500 tons.

³Does not include acreage of cover consisting of summer legumes interplanted or grown in combination with other crops, nor acreage of natural cover or cover of sudan, sorghum, or small-grain stubble for wind erosion protection.

⁴Included with terracing.

⁵Included with contour listing.

⁶Extent of participation not available in unit shown.

⁷Less than 500 acres.

Production and Marketing Administration.

¹ Payments for these practices represented 86 percent of the amount paid for all conservation practices under the 1945 program. Conservation practices were also carried out under the 1945 program in Alaska, Hawaii and Puerto Rico, although no data are shown here for these territories.

² Included as part of grazing land management practices.

³ Deferred grazing on non-irrigated farm pastures only, other deferred grazing included as part of grazing land management practices.

⁴ Incomplete to the extent indicated in footnotes 2 and 3.

Total		1,755	944,932,578	4,183,677	617,278,158	1,586

¹For specific procedure on organization of soil conservation districts, reference should be made to each of the respective State soil conservation district laws.

²Upon request, the United States Department of Agriculture enters into memoranda of understanding with districts for such assistance from departmental agencies as may be available.

³Includes 10 wind-erosion districts.

⁴Includes 21 State cooperative grazing districts.

TABLE 728.--Growth of State soil conservation districts, by calendar years, 1937-46¹

Year	Districts organized		Total area in districts		Approximate land farms within districts	
	Each year	Cumulative total	New districts and additions	Cumulative total	Added each year	Cumulative total
	Number	Number	Acres	Acres	Acres	Acres

¹The data shown in this table for some major practices are for first-time application. In most cases these practices recur on the same land year after year, but such amounts as actually recur are not included. Data on district organization are shown in table 728.

²Included with crop residue management.

³Includes windbreak and shelterbelt plantings.

Combined treatment represents the farmland area in districts on which all of the planned practices were completed in the years shown.

TABLE 732.--Conservation plans prepared and treatment applied in soil conservation districts with the assistance of Soil Conservation Service technicians, 1946, and cumulative to Dec. 31, 1946¹

¹Conservation plans for complete operating units are carried out through farmer-district cooperative agreements, with assistance from the Soil Conservation Service. It usually takes several years to apply fully all of the treatments called for in the plans. Therefore, the acreage planned in any year would be treated in subsequent years.

²Total of all programs, by States, was shown in Agricultural Statistics, 1946, table 711, which included the plans and acreage of the following programs. Demonstration projects, SCS-COC camps, farm forestry demonstration projects, Extension-SCS demonstration farms, plans in cooperation with AAA and FSA, land utilization, drought relief, water facilities, and various other miscellaneous programs on private and public lands. Since most of these programs are no longer in operation, these data are not being published again.

¹Data shown are for some principal practices on which reports are received nationally. In addition there are many other practices on which work is done.

²Both planned and applied totals are for satisfactory first-time application only. Reapplication and maintenance of practices on the same area year after year are not included. Planned practices are reported as applied when properly installed on the land, the job thereafter being one of maintenance.

¹Group-enterprise plans are defined as any job involving two or more land owners or operators, who agree to work together to carry on the construction, operation, and maintenance required. Some of this work began in 1943 and 1944. However, the reports for 1946, showing the calendar year and cumulative totals, are considered most complete.

¹The preparation of soils maps by the Division of Soil Survey, Bureau of Plant Industry, Soils, and Agricultural Engineering, is generally done in cooperation with the State agricultural experiment stations. Inquiry for available maps and reports may be made of the State agricultural college, the State agricultural experiment station, or the U. S. Department of Agriculture.

²These figures refer to work done for a period of over 40 years and in some instances include re-surveys.

³During the fiscal year 1946, maps were published for the following counties in the States indicated: California, Bakersfield area, Indiana, LaPorte and Martin counties, Kentucky, Calloway County; Missouri, Linn County; Tennessee, Lincoln County; Utah, Salt Lake area, and Virginia, Princess Anne, Russell, and Washington counties.

¹Includes land capable of producing timber of commercial quantity and quality, and available now or prospectively, for commercial use. Status beginning of 1945.

²Western and central portions of Oklahoma and Texas included in the Plains region; eastern portions included in the West Gulf region.

³Eastern and central portions of South Dakota included in the Plains, southwestern portion (Black Hills) included in the North Rocky Mountain region.

¹Status beginning of 1945 Includes volume on land capable of producing timber of commercial quantity and quality and available now or prospectively for commercial use Includes trees large enough for sawlogs regardless of the actual use, in accordance with the practice of the region Volumes are on lumber-tally basis

Minimum sizes of saw-timber trees New England, Middle Atlantic 9" D.B.H. for softwoods and 11" for hardwoods Lake, Plains 9" D.B.H. Central 10" D.B.H. South Atlantic, Southeast, West Gulf 9" D.B.H. for pine and cypress and 13" for hardwoods, Pacific Northwest (pine subregion), North Rocky Mountain, South Rocky Mountain In the pine type, 11" D.B.H. for pine, cedar, and cottonwood, and 13" for fir and hemlock, in the fir type, 11" D.B.H. Pacific Northwest (Douglas-fir subregion) 15" D.B.H. California All except redwood type, 12" D.B.H., redwood type, 24" D.B.H.

Virgin growth includes mature or overmature forests not seriously disturbed by cutting or by fire, insects and disease infestations, or other natural causes, and generally characterized by the absence of any net growth, and mature or overmature forests so lightly cut or otherwise disturbed as not to make any material change in the original forest canopy or the quality of the original stand, or to induce net growth in any appreciable amount

Second growth includes forests which have been cut over or which have been so disturbed by fire, insects, or disease, windstorm, or other natural causes that net growth occurs and they no longer qualify as virgin forests

²Volume in western and central portions of Oklahoma and Texas included in the Plains region, that in eastern portions included in the West Gulf region

³Volume in eastern and central portions of South Dakota included in the Plains, that in southwestern portion (Black Hills) included in North Rocky Mountain region

¹Status beginning of 1945. Of the total 1,042,556 million board feet in this tabulation, 1,036,751 million board feet is softwoods and the remainder is hardwoods, as indicated.

²May include some white fir, Sitka spruce, western hemlock, Port Orford cedar, and western red cedar, which are commonly lumped with Douglas fir in redwood cruising.

³Includes Jeffrey pine

⁴Includes the western white pine, mountain hemlock, and lodgepole pine recorded

In cruises of fir areas

⁵Redwood exclusive of volume of 1,000 Big trees reported on cruises in the West-Side Sierra sub-region.

⁶Excluding 416 million board feet in Plains region Grand total of Ponderosa pine in the United States is 185,441 million board feet See also table 739

¹Definition of units.

National forests.--Areas established as national forests by Act of Congress or Presidential proclamation. Acreages shown as under Forest Service administration include small administrative sites outside of proclaimed boundaries, and those portions of land-utilization projects and other areas over which the Forest Service has supervision located within the national forest boundaries. Land-utilization and other areas located outside the national forests and under Forest Service supervision are not included; such areas being listed under the classification "Land-utilization and other areas".

Purchase units --Areas established by the Secretary of Agriculture with the concurrence of the National Forest Reservation Commission but not formalized by Act of Congress or Presidential Proclamation. Acreages shown under Forest Service administration include all administrative sites outside the established boundaries, and those portions of the land-utilization projects and other areas over which the Forest Service has supervision located within the established purchase unit boundaries. Land-utilization and other areas located outside the boundaries and under Forest Service supervision are not included; such areas being listed under the classification "Land-utilization and other areas".

Forest Service.

TABLE 746 FOOTNOTES - CONTINUED

Experimental areas.--Areas outside of the exterior boundaries of national forests or purchase units which have been reserved and dedicated to forest or range research and experimentation by Executive Order or other authorized administrative action. Massachusetts Experimental Forest in Maine and the McNeill Division of the Harrison Experimental Forest in Mississippi, which have both purchase-unit and experimental status, are only included in the experimental-area summaries. Land-utilization and other areas.--Detailed information can be obtained from the Forest Service, Washington, D.C.

²Does not include lands within certain State forests in Michigan which have been acquired by the United States with intent to exchange them for State Lands within the national forests.³Exclusive of 1,890 acres of the Beltsville Research Center of the Department of Agriculture, assigned to the Forest Service for use as an experimental area.

¹Per M feet, board measure, f.o.b. mill²Data not available.

Forest Service. Quantities and prices for 1869, 1879, 1889, 1909, 1919, 1942, 1943, 1944, and 1945 from Bureau of the Census, Department of Commerce, publications on lumber production and price. Quantities for other years are Forest Service estimates, prices for other years from Census and Forest Service publications on lumber production and price. Quantities for the years 1799-1928 were published in "Lumber Production, 1869-1934," by Reynolds and Pierson; those for the years 1929-41 and 1946 have not been previously published. 1946 data are Forest Service estimates, subject to revision.

Weather Bureau, Department of Commerce These figures are simple averages of the precipitation readings at all the weather stations in each State.

This chapter of the book contains miscellaneous statistics relating to agriculture, which do not fit into the preceding chapters. Statistics on such commodities as turpentine, rosin, and fish are included here. Weather data pertaining to farming; refrigeration statistics, freight tonnage and revenue, Government purchases and price-support and subsidy programs, as well as food distribution and relief work are also covered. Also included are statistics of the Agricultural Extension Service. New tables this year contain data on frozen-food lockers and on deliveries of purchased agricultural commodities under direction of the Department of Agriculture.

¹Weighted prices to 1941 but only simple averages for 1941 and thereafter. Savannah market prices for turpentine include container through 1940 but are exclusive of container for 1941 and thereafter.

²Unit: One barrel (50 gallons) of turpentine plus 2 2/3 drums (520 pounds net each) of rosin.

³Season's market value represents total production of gum naval stores for each crop year, multiplied by the Savannah average market price.

¹Rosin, not for violins; imports for consumption, as reported by the Department of Commerce.
²Drums of 520 pounds net weight.
³Trade estimates.
⁴Total supply, less exports and Mar 31 stocks.
⁵Prior to 1937, figures are for calendar years.
⁶Beginning with the 1936 season, includes rosin used in producers' plants in production of unclassified derived products.

¹ Packaged fish represents production of fillets, steaks, and sticks by wholesale dealers² No production of this item as shown in the records from 1928 through 1937³ Does not include the California production⁴ Estimated

⁵ Production in California is not included. In 1941, the last year these data were available, the yield of packaged fish in California totaled 5,384,000 pounds, valued at \$1,031,740. Of this production 1,380,000 pounds, valued at \$226,200 were flounders, and 4,004,000 pounds, valued at \$805,540, were other fish.

¹Distribution, without charge to recipients, of food commodities acquired by the Government and distributed under provisions of Section 32, Public Law 320, 74th Congress, approved Aug. 24, 1935, as amended. Distribution during the year ended June 1947, 40,108,000 pounds costing \$5,735,000 was commodities distributed under provisions of Section 6 of the National School Lunch Act. Distribution to school-lunch programs is accomplished through cooperating distributing agencies in States.

²Total cost to the Government of the commodity as delivered to the distributing agency, includes cost of purchase, handling, warehousing, and transportation, but does not include costs of administration of the program.

³A subsidy program to expand markets for agricultural products, maintain outlets for Section 32 commodities, and support school-lunch programs. Sponsors of school-lunch programs are reimbursed by the Government for local purchases of food on a basis of the quality and quantity of meals served. The program was started in February 1943. Not included in the figure for 1947 is the sum of \$10,000,000 authorized under Section 5 of the National School Lunch Act to provide nonfood assistance for the school lunch programs. Approximately 39,000 schools purchased lunch-room equipment under this program.

⁴Total cost in subsidy payments by the Government, does not include costs of administration of the program.

⁵A subsidy program to expand markets for milk. Handlers at first were reimbursed by the Government to the full agreed rate for delivery of milk at reduced rates for consumption by children in schools participating in the program. Later, the schools themselves paid the full local selling price to handlers, and were reimbursed by the Government at a rate equal to the local producer price. In July 1943 the program was merged with the indemnity plan for school-lunch programs.

⁶Information not available.

Production and Marketing Administration.

¹Distribution, without charge to recipients, of food commodities acquired by the Government and distributed under provisions of Section 32, Public Law 320, 74th Congress, approved Aug. 24, 1935, as amended. Distribution to ultimate eligible recipients is accomplished through cooperating distributing agencies in States.

²Total cost to the Government of the commodity as delivered to the distributing agency, includes cost of purchase, handling, warehousing, and transportation, but does not include costs of administration of the program.

³A consumer subsidy program to expand markets for surplus foods. The grant was made through State and local welfare agencies in the form of "food stamps," issued to households receiving public assistance and redeemed by the Government through retail grocers in exchange for foods designated by the Secretary of Agriculture to be in surplus. The program was started in May 1939 and was discontinued in February 1943.

⁴Total cost in subsidy payments by the Government, does not include costs of administration of the program.

⁵A consumer subsidy program to expand markets for surplus milk. Handlers were reimbursed by the Government to the full agreed rate for delivery of milk at reduced prices to certified households receiving public assistance from State and local welfare agencies. The program was discontinued in June 1943.

¹Distribution, without charge to recipients, of food commodities acquired by the Government and distributed under provisions of Section 32, Public Law 320, 74th Congress, approved Aug. 24, 1935, as amended, part of the distribution to school-lunch programs, 40,108,000 pounds costing \$5,735,000, was commodities distributed under provisions of Section 6 of the National School Lunch Act. Distribution to ultimate eligible recipients is accomplished through cooperating distributing agencies in States. Eligible recipients include school-lunch programs, eleemosynary institutions, and households receiving public assistance from State or local welfare agencies.

²Total cost to the Federal Government of the commodity as delivered to the distributing agency, it includes the cost of purchase, handling, warehousing, and transportation, but does not include costs of administration of the program.

³Less than \$500

1947.....	3,270	4,834	4,203	6,016	835	927

¹In this tabulation, "peak participation" is the participation during the month of the year when the largest number of persons participated in the program; "average participation" is the average for the 12 months of the fiscal year.

²Distribution, without charge to recipients, of food commodities acquired by the Government and distributed under provisions of Section 32, Public Law 320, 74th Congress, approved Aug. 24, 1935, as amended, part of the distribution to school-lunch programs during the year ended June 1947, 40,108,000 pounds costing \$5,735,000, was commodities distributed under provisions of Section 6 of the National School Lunch Act. Distribution to ultimate eligible recipients is accomplished through cooperating distributing agencies in States. Eligible recipients include school-lunch programs, eleemosynary institutions, and households receiving public assistance from State or local welfare agencies.

³A subsidy program to expand markets for agricultural products, maintain outlets for Section 32 commodities, and support school-lunch programs. Sponsors of school-lunch programs are reimbursed by the Government for local purchases of food on basis of the quality and quantity of meals served. The program was started in February 1943.

⁴A subsidy program to expand markets for milk. Handlers at first were reimbursed by the Government to the full agreed rate for delivery of milk at reduced rates for consumption by children in schools participating in the program. Later, the schools themselves paid the full local selling price to handlers and were reimbursed by the Government at a rate equal to the local producer price. In July 1943 the program was merged with the indemnity plan for school-lunch programs.

⁵A consumer subsidy program to expand markets for surplus foods. The grant was made through State and local welfare agencies in the form of "food stamps," issued to households receiving public assistance and redeemed by the Government through retail grocers in exchange for foods designated by the Secretary of Agriculture to be in surplus. The program was started in May 1939 and was discontinued in February 1943.

⁶A subsidy program to expand markets for surplus milk. Handlers were reimbursed by the Government to the full agreed rate for delivery of milk at reduced rates to certified households receiving assistance from State or local welfare agencies. The program was discontinued in June 1943.

¹Weight as delivered at original shipping point. In the case of freight transported over several different railways, each ton is counted only when transported by the first railway. Some traffic, reshipped under new billing without benefit of transit privileges or proportional rates, may be counted more than once.

²Average revenue per ton varies partly because of unequal rates per 100 pounds for equal distances, and partly because of unequal average lengths of haul. Average revenue per car varies for the same reasons, and also because of unequal average numbers of tons per car.

Bureau of Agricultural Economics. Compiled from reports of the Interstate Commerce Commission.

¹1941 data from June 16 survey, all others Oct 1²Reduction from earlier years is due chiefly to the elimination from reports of meat-packing establishments of the "working space" in such establishments

Production and Marketing Administration

Footnotes to TABLE 786

¹Preliminary. See Freight Commodity Statistics Annual Report for 1946, which includes revisions.²Weight as delivered at original shipping point. In the case of freight transported over several different railways, each ton is counted only when transported by the first railway. Some traffic, reshipped under new billing without benefit of transit privileges or proportional rates, may be counted more than once.³Average revenue per ton varies partly because of unequal rates per 100 pounds for equal distances and partly because of unequal average lengths of haul. Average revenue per car varies for the same reasons, and also because of unequal average numbers of tons per car.

¹Number of plants operating, as compiled by the Extension Service, U.S.D.A., July 1, 1946.²Total capacity, by States, computed by multiplying average capacity per plant reporting by number of plants operating.³Data on average plant capacity, percentage of farm patronage, and pounds of meat, fruits, and vegetables processed per locker rented were compiled from reports from 2,882 plants, filed with the Farm Credit Administration. Poundage data are for calendar year 1945; other data as of Jan. 1, 1946.⁴Data not available.

Farm Credit Administration.
